Unfortunately, after the paper was accepted to be published in its current form, we uploaded a faulty figure which we then failed to recognize in the proofreading phase. The erroneous figure is Fig. 6 in the published paper. In Fig. 6, the lower four panels of the figure are copies of the upper four panels, which is an error and does not match the caption. In the lower four panels of Fig. 6, the following four quantities should have been shown, as the caption correctly states: the extinction coefficient at 449 nm, the extinction ratio at 449 and 756 nm, the number density, and the effective radius. The corrected figure is shown below.

Acknowledgements. We acknowledge support from the University of Greifswald and thank the Earth Observation Data Group at the University of Oxford for providing the IDL Mie routines used in this study. We also want to thank Elizaveta Malinina for the helpful discussions.

Financial support. This research has been funded by the Deutsche Forschungsgemeinschaft (DFG) as part of the Research Unit VolImpact (grant no. 398006378).

Published by Copernicus Publications on behalf of the European Geosciences Union.
Figure 6. Monthly means of median radius, mode width, mode radius, absolute mode width, extinction coefficient at 449 nm, extinction ratio at 449 and 756 nm, number density, and effective radius for June 2017 with 5° latitude bins. The red line indicates tropopause height.
