**Abstract.** This supporting information material (SI-1) documents all the measurement campaigns conducted for leak detection and quantification of methane emissions from Butte-Bellot landfill.

## List of Figures

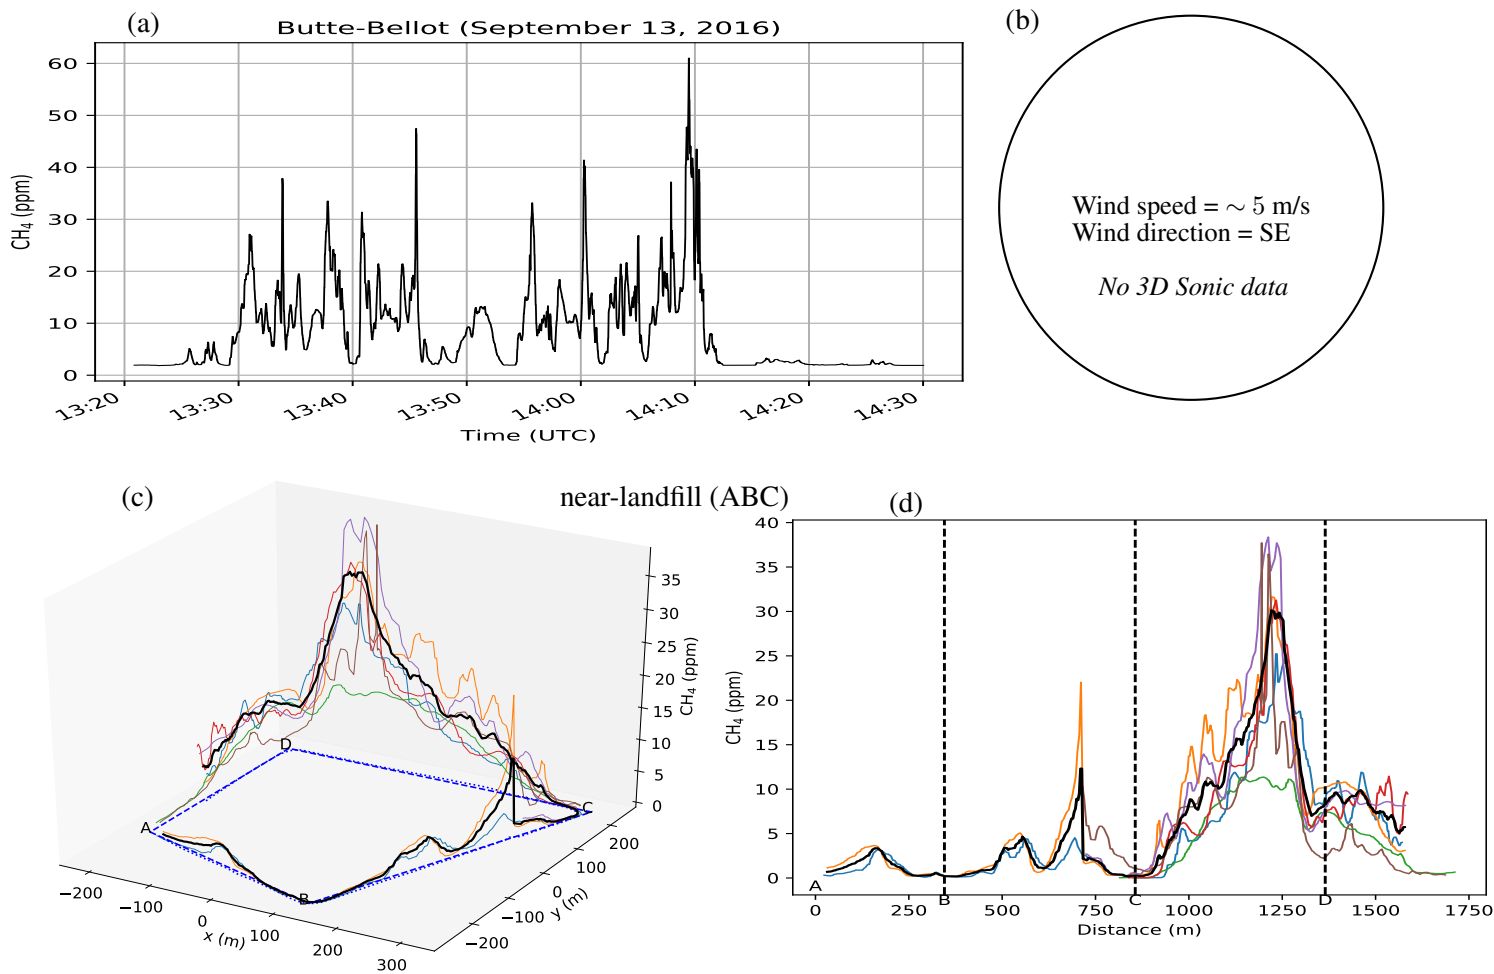

5	S1.1 The development of the Butte-Bellot landfill as depicted in satellite imagery provided by Google Earth (©Google Earth). The years that each image was captured, progressing from left to right in each row, and from the top row to the bottom row, are: 2003, 2005, 2007, 2009, 2014, 2015, 2016, 2018, and 2020. These images suggest that the Eastern side of the landfill has been filled sequentially in three cells starting in the North-East (active 2005,2007) then progressing to the East (active: 2014, 2015) and finally the South-East (active since 2018 to 2020). . . . .	4
10	S1.2 (a) CH <sub>4</sub> mole fraction time series from the mobile near-surface measurements and (b) wind conditions on <b>September 13, 2016</b> . Enhancement of CH <sub>4</sub> mole fractions above the background in plume transects (c) & (d) along the near-landfill (ABCD) road. The distances along road segments are computed from A towards anticlockwise direction . Black lines in (c)-(d) show the averaged mole fractions computed from these multiple transects. . . . .	5
15	S1.3 (a) CH <sub>4</sub> mole fraction time series from the mobile near-surface measurements and (b) wind conditions on <b>November 17, 2016</b> . Enhancement of CH <sub>4</sub> mole fractions above the background in plume transects (c) & (d) along the near-landfill (ABCD) road. The distances along road segments are computed from A towards anticlockwise direction . Black lines in (c)-(d) show the averaged mole fractions computed from these multiple transects. . . . .	6
20	S1.4 (a) CH <sub>4</sub> mole fraction time series from the mobile near-surface measurements and (b) wind rose on <b>December 05, 2016</b> . Enhancement of CH <sub>4</sub> mole fractions above the background in plume transects along the first (c) & (d) and the second (e) & (f) remote roads. The distances along road segments are computed from E . Black lines in (c)-(f) show the averaged mole fractions computed from these multiple transects. . . . .	7

25	S1.5 (a) CH <sub>4</sub> mole fraction time series from the mobile near-surface measurements and (b) wind conditions on <b>August 11, 2017</b> . Enhancement of CH <sub>4</sub> mole fractions above the background in plume transects (c) & (d) along the near-landfill (ABC) road and (e) & (f) far-landfill remote road (EF). The distances along road segments are computed from A and E respectively for near-landfill (ABC) and far-landfill (EF) roads. Black lines in (c)-(f) show the averaged mole fractions computed from these multiple transects. . . . .	8
30	S1.6 (a) CH <sub>4</sub> mole fraction time series from the mobile near-surface measurements and (b) wind conditions on <b>September 28, 2017</b> . Enhancement of CH <sub>4</sub> mole fractions above the background in plume transects (c) & (d) along the near-landfill (ABC) road. The distances along road segments are computed from A towards anticlockwise direction. Black lines in (c)-(d) show the averaged mole fractions computed from these multiple transects. . . . .	9
35	S1.7 (a) CH <sub>4</sub> mole fraction time series from the mobile near-surface measurements and (b) wind conditions on <b>October 06, 2017</b> . Enhancement of CH <sub>4</sub> mole fractions above the background in plume transects (c) & (d) along the near-landfill (ABC) road and (e) & (f) far-landfill remote road (EF). The distances along road segments are computed from A and E respectively for near-landfill (ABC) and far-landfill (EF) roads. Black lines in (c)-(f) show the averaged mole fractions computed from these multiple transects. . . . .	10
40	S1.8 (a) CH <sub>4</sub> mole fraction time series from the mobile near-surface measurements and (b) wind conditions on <b>July 26, 2018</b> . Enhancement of CH <sub>4</sub> mole fractions above the background in plume transects (c) & (d) along the near-landfill (ABC) road and (e) & (f) far-landfill remote road (EF). The distances along road segments are computed from A and E respectively for near-landfill (ABC) and far-landfill (EF) roads. Black lines in (c)-(f) show the averaged mole fractions computed from these multiple transects. . . . .	11
45	S1.9 (a) CH <sub>4</sub> mole fraction time series from the mobile near-surface measurements and (b) wind rose on <b>November 27, 2018</b> . Enhancement of CH <sub>4</sub> mole fractions above the background in plume transects (c) & (d) along the near-landfill (ABC) road. The distances along road segments are computed from A. Black lines in (c)-(d) show the averaged mole fractions computed from these multiple transects. . . . .	12
50	S1.10(a) CH <sub>4</sub> mole fraction time series from the mobile near-surface measurements and (b) wind rose on <b>January 10, 2019</b> . Enhancement of CH <sub>4</sub> mole fractions above the background in plume transects (c) & (d) along the near-landfill (ABC) road and (e) & (f) far-landfill remote road (EF). The distances along road segments are computed from A and E respectively for near-landfill (ABC) and far-landfill (EF) roads. Black lines in (c)-(f) show the averaged mole fractions computed from these multiple transects. . . . .	13
55	S1.11(a) CH <sub>4</sub> mole fraction time series from the mobile near-surface measurements and (b) wind conditions on <b>February 12, 2019</b> . Enhancement of CH <sub>4</sub> mole fractions above the background in plume transects (c) & (d) along the near-landfill (ABC) road and (e) & (f) far-landfill remote road (EF). The distances along road segments are computed from A and E respectively for near-landfill (ABC) and far-landfill (EF) roads. Black lines in (c)-(f) show the averaged mole fractions computed from these multiple transects. . . . .	14
60	S1.12(a) CH <sub>4</sub> mole fraction time series from the mobile near-surface measurements and (b) wind rose on <b>July 10, 2019</b> . Enhancement of CH <sub>4</sub> mole fractions above the background in plume transects (c) & (d) along the near-landfill (ABC) road and (e) & (f) far-landfill remote road (EF). The distances along road segments are computed from A and E respectively for near-landfill (ABC) and far-landfill (EF) roads. Black lines in (c)-(f) show the averaged mole fractions computed from these multiple transects. . . . .	15
65	S1.13(a) CH <sub>4</sub> mole fraction time series from the mobile near-surface measurements and (b) wind rose on <b>August 02, 2019</b> . Enhancement of CH <sub>4</sub> mole fractions above the background in plume transects (c) & (d) along the near-landfill (ABC) road and (e) & (f) far-landfill remote road (EF). The distances along road segments are computed from A and E respectively for near-landfill (ABC) and far-landfill (EF) roads. Black lines in (c)-(f) show the averaged mole fractions computed from these multiple transects. . . . .	16
70	S1.14(a) CH <sub>4</sub> mole fraction time series from the mobile near-surface measurements and (b) wind rose on <b>August 29, 2019</b> . Enhancement of CH <sub>4</sub> mole fractions above the background in plume transects (c) & (d) along the near-landfill (ABC) road. The distances along road segments are computed from A. Black lines in (c)-(d) show the averaged mole fractions computed from these multiple transects. . . . .	17

75	S1.15(a) CH <sub>4</sub> mole fraction time series from the mobile near-surface measurements and (b) wind rose on <b>September 13, 2019</b> . Enhancement of CH <sub>4</sub> mole fractions above the background in plume transects (c) & (d) along the near-landfill (ABC) road and (e) & (f) far-landfill remote road (EF). The distances along road segments are computed from A and E respectively for near-landfill (ABC) and far-landfill (EF) roads. Black lines in (c)-(f) show the averaged mole fractions computed from these multiple transects. . . . .	18
80	S1.16(a) CH <sub>4</sub> mole fraction time series from the mobile near-surface measurements and (b) wind rose on <b>December 09, 2019</b> . Enhancement of CH <sub>4</sub> mole fractions above the background in plume transects (c) & (d) along the near-landfill (ABC) road and (e) & (f) far-landfill remote road (EF). The distances along road segments are computed from A and E respectively for near-landfill (ABC) and far-landfill (EF) roads. Black lines in (c)-(f) show the averaged mole fractions computed from these multiple transects. . . . .	19
85	S1.17(a) CH <sub>4</sub> mole fraction time series from the mobile near-surface measurements and (b) wind rose on <b>February 05, 2020</b> . Enhancement of CH <sub>4</sub> mole fractions above the background in plume transects (c) & (d) along the near-landfill (ABC) road and (e) & (f) far-landfill remote road (EF). The distances along road segments are computed from A and E respectively for near-landfill (ABC) and far-landfill (EF) roads. Black lines in (c)-(f) show the averaged mole fractions computed from these multiple transects. . . . .	20
90	S1.18(a) CH <sub>4</sub> mole fraction time series from the mobile near-surface measurements and (b) wind rose on <b>March 04, 2020</b> . Enhancement of CH <sub>4</sub> mole fractions above the background in plume transects (c) & (d) along the near-landfill (ABC) road. The distances along road segments are computed from A for near-landfill (ABC) road. Black lines in (c)-(d) show the averaged mole fractions computed from these multiple transects. . . . .	21
95	S1.19(a) CH <sub>4</sub> mole fraction time series from the mobile near-surface measurements and (b) wind rose on <b>September 04, 2020</b> . Enhancement of CH <sub>4</sub> mole fractions above the background in plume transects (c) & (d) along the near-landfill (ABC) road. The distances along road segments are computed from A for near-landfill (ABC) road. Black lines in (c)-(d) show the averaged mole fractions computed from these multiple transects. . . . .	22
100	S1.20(a) CH <sub>4</sub> mole fraction time series from the mobile near-surface measurements and (b) wind conditions on <b>October 15, 2020</b> . Enhancement of CH <sub>4</sub> mole fractions above the background in plume transects (c) & (d) along the near-landfill (ABC) road. The distances along road segments are computed from A for near-landfill (ABC) road. Black lines in (c)-(d) show the averaged mole fractions computed from these multiple transects. . . . .	23
105	S1.21(a) CH <sub>4</sub> mole fraction time series from the mobile near-surface measurements and (b) wind rose on <b>December 01, 2020</b> . Enhancement of CH <sub>4</sub> mole fractions above the background in plume transects (c) & (d) along the near-landfill (ABC) road and (e) & (f) far-landfill remote road (EF). The distances along road segments are computed from A and E respectively for near-landfill (ABC) and far-landfill (EF) roads. Black lines in (c)-(f) show the averaged mole fractions computed from these multiple transects. . . . .	24
	S1.22(a) CH <sub>4</sub> mole fraction time series from the mobile near-surface measurements and (b) wind rose on <b>December 08, 2020</b> . Enhancement of CH <sub>4</sub> mole fractions above the background in plume transects (c) & (d) along the near-landfill (ABC) road and (e) & (f) far-landfill remote road (EF). The distances along road segments are computed from A and E respectively for near-landfill (ABC) and far-landfill (EF) roads. Black lines in (c)-(f) show the averaged mole fractions computed from these multiple transects. . . . .	25

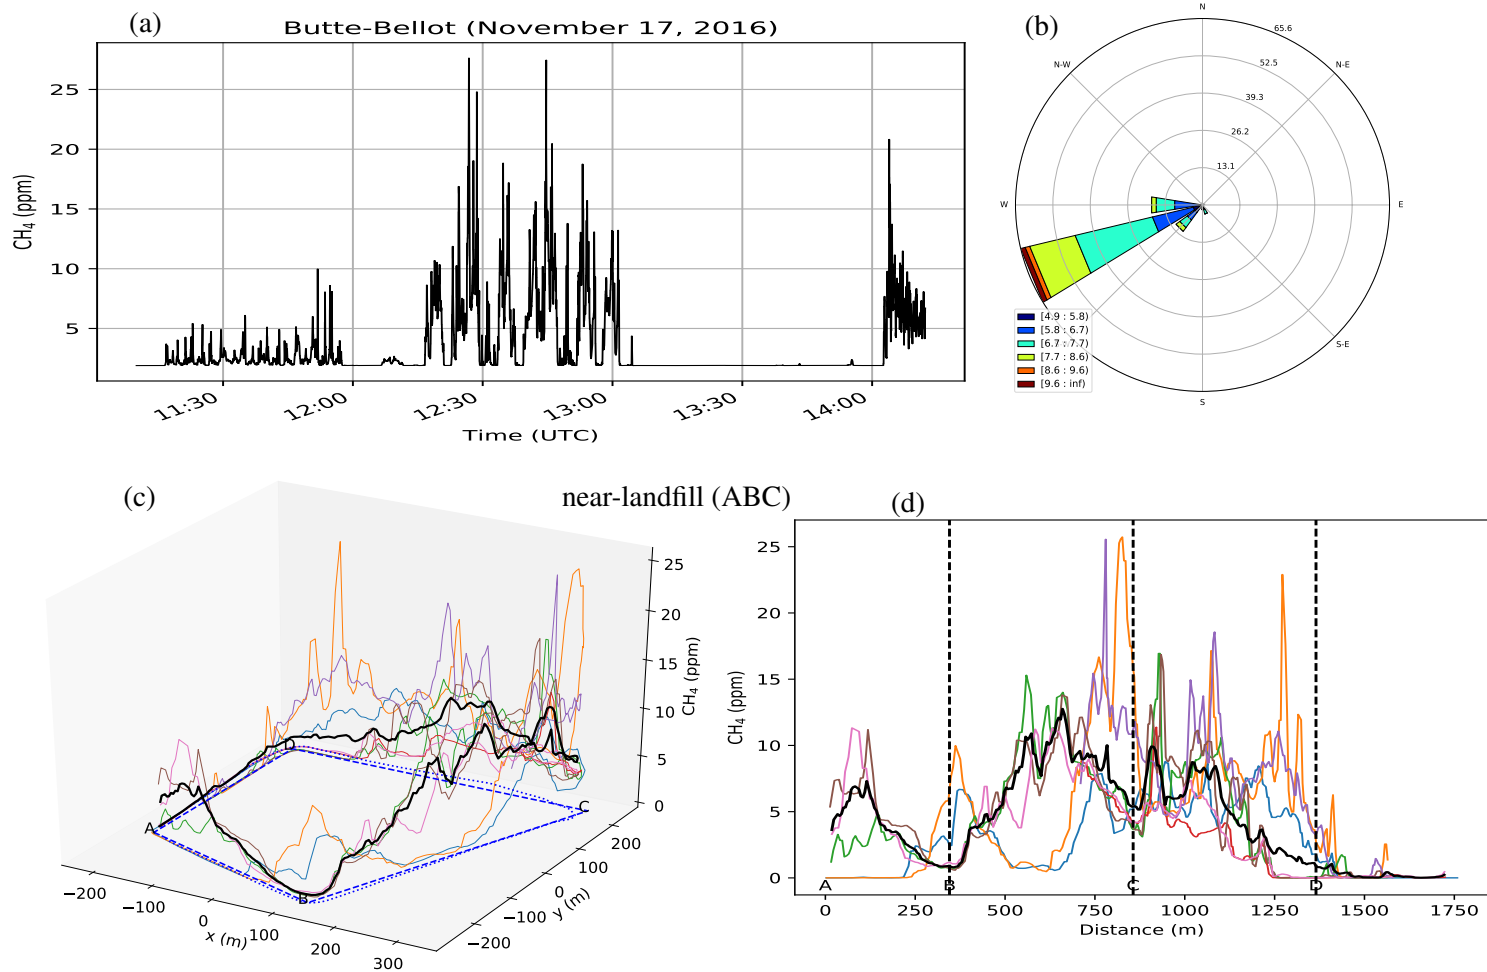

**Figure S1.1.** The development of the Butte-Bellot landfill as depicted in satellite imagery provided by Google Earth (©Google Earth). The years that each image was captured, progressing from left to right in each row, and from the top row to the bottom row, are: 2003, 2005, 2007, 2009, 2014, 2015, 2016, 2018, and 2020. These images suggest that the Eastern side of the landfill has been filled sequentially in three cells starting in the North-East (active 2005,2007) then progressing to the East (active: 2014, 2015) and finally the South-East (active since 2018 to 2020).

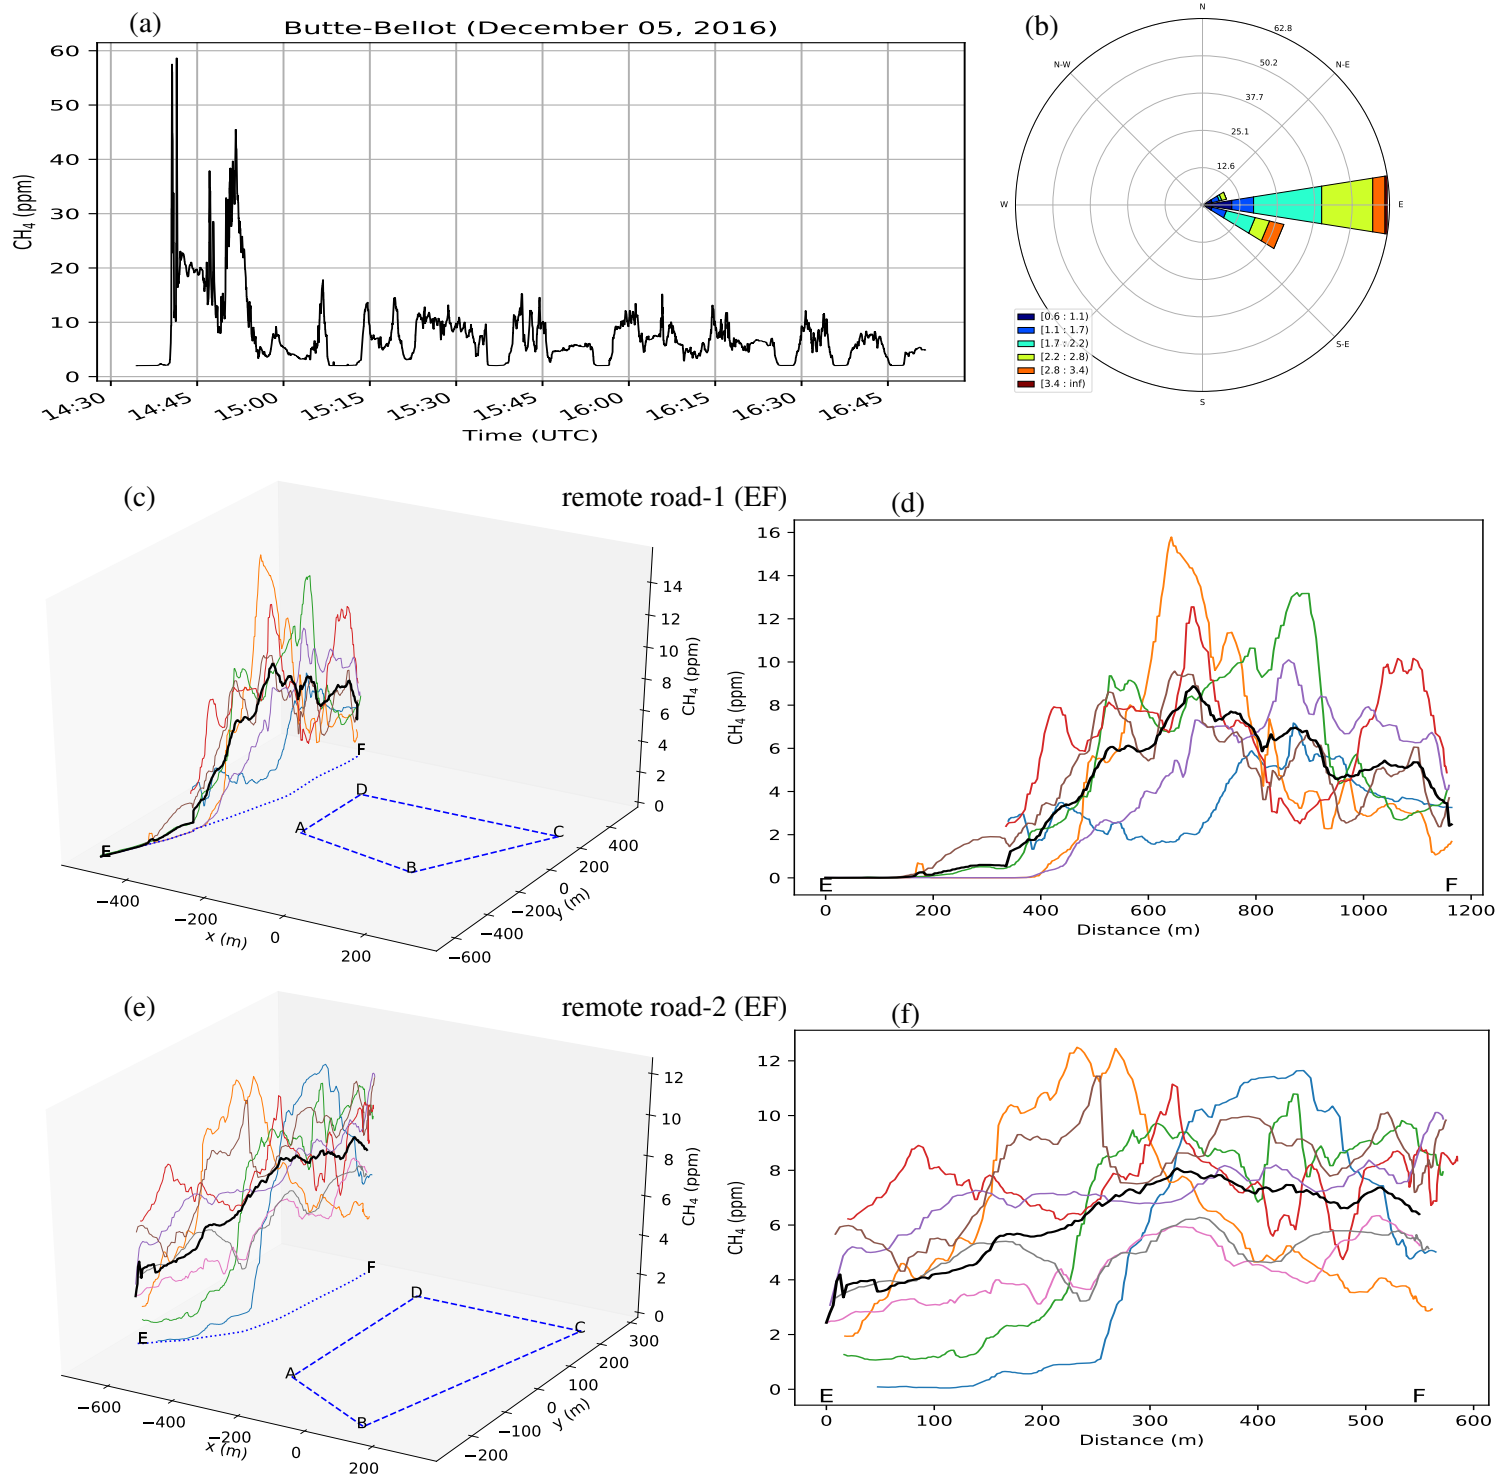

**Figure S1.2.** (a) CH<sub>4</sub> mole fraction time series from the mobile near-surface measurements and (b) wind conditions on **September 13, 2016**. Enhancement of CH<sub>4</sub> mole fractions above the background in plume transects (c) & (d) along the near-landfill (ABCD) road. The distances along road segments are computed from A towards anticlockwise direction. Black lines in (c)-(d) show the averaged mole fractions computed from these multiple transects.

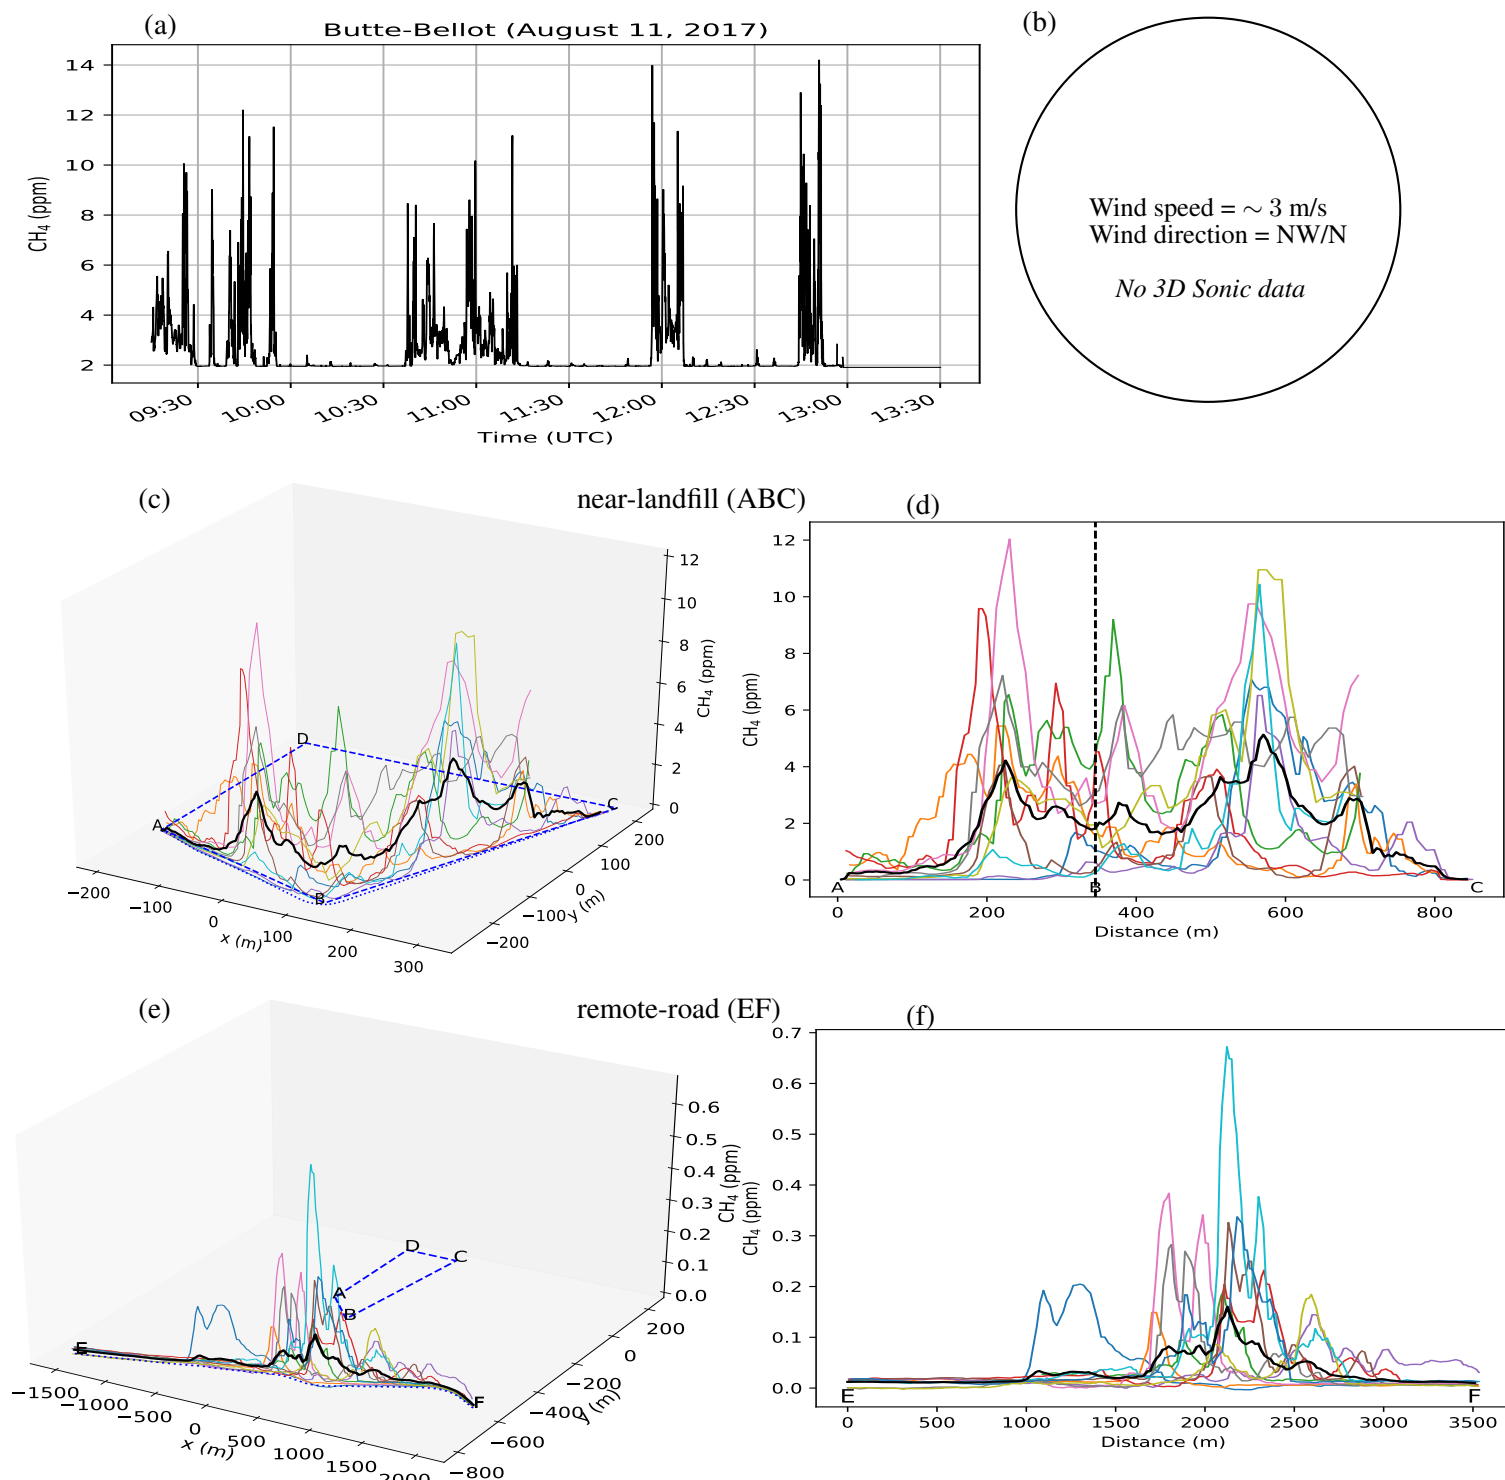

**Figure S1.3.** (a)  $\text{CH}_4$  mole fraction time series from the mobile near-surface measurements and (b) wind conditions on **November 17, 2016**. Enhancement of  $\text{CH}_4$  mole fractions above the background in plume transects (c) & (d) along the near-landfill (ABCD) road. The distances along road segments are computed from A towards anticlockwise direction. Black lines in (c)-(d) show the averaged mole fractions computed from these multiple transects.

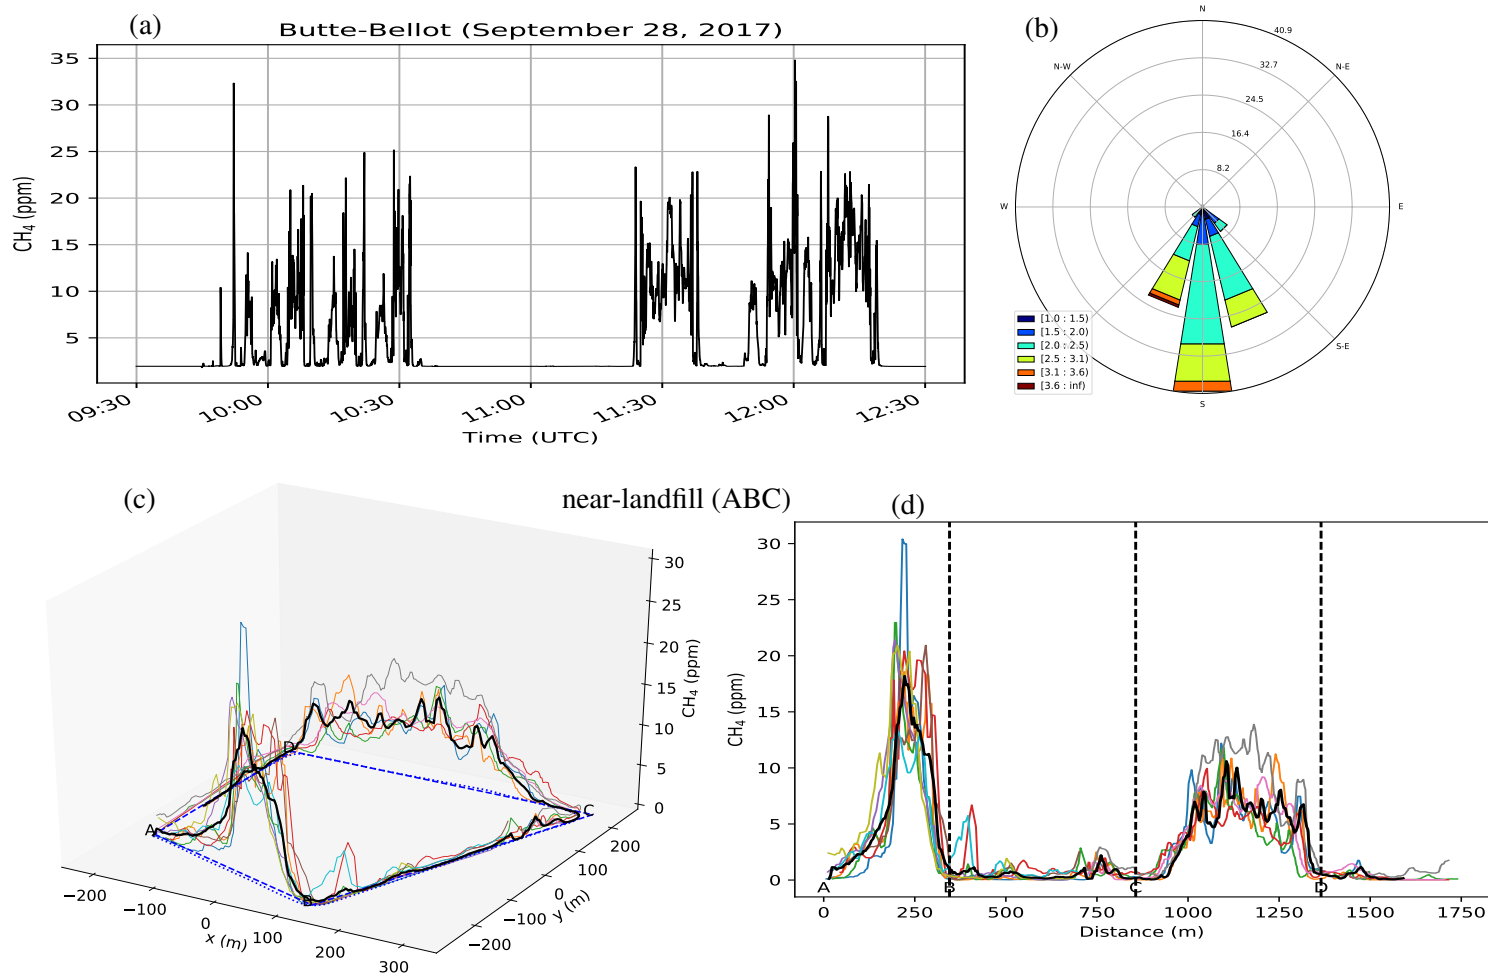

**Figure S1.4.** (a) CH<sub>4</sub> mole fraction time series from the mobile near-surface measurements and (b) wind rose on **December 05, 2016**. Enhancement of CH<sub>4</sub> mole fractions above the background in plume transects along the first (c) & (d) and the second (e) & (f) remote roads. The distances along road segments are computed from E. Black lines in (c)-(f) show the averaged mole fractions computed from these multiple transects.

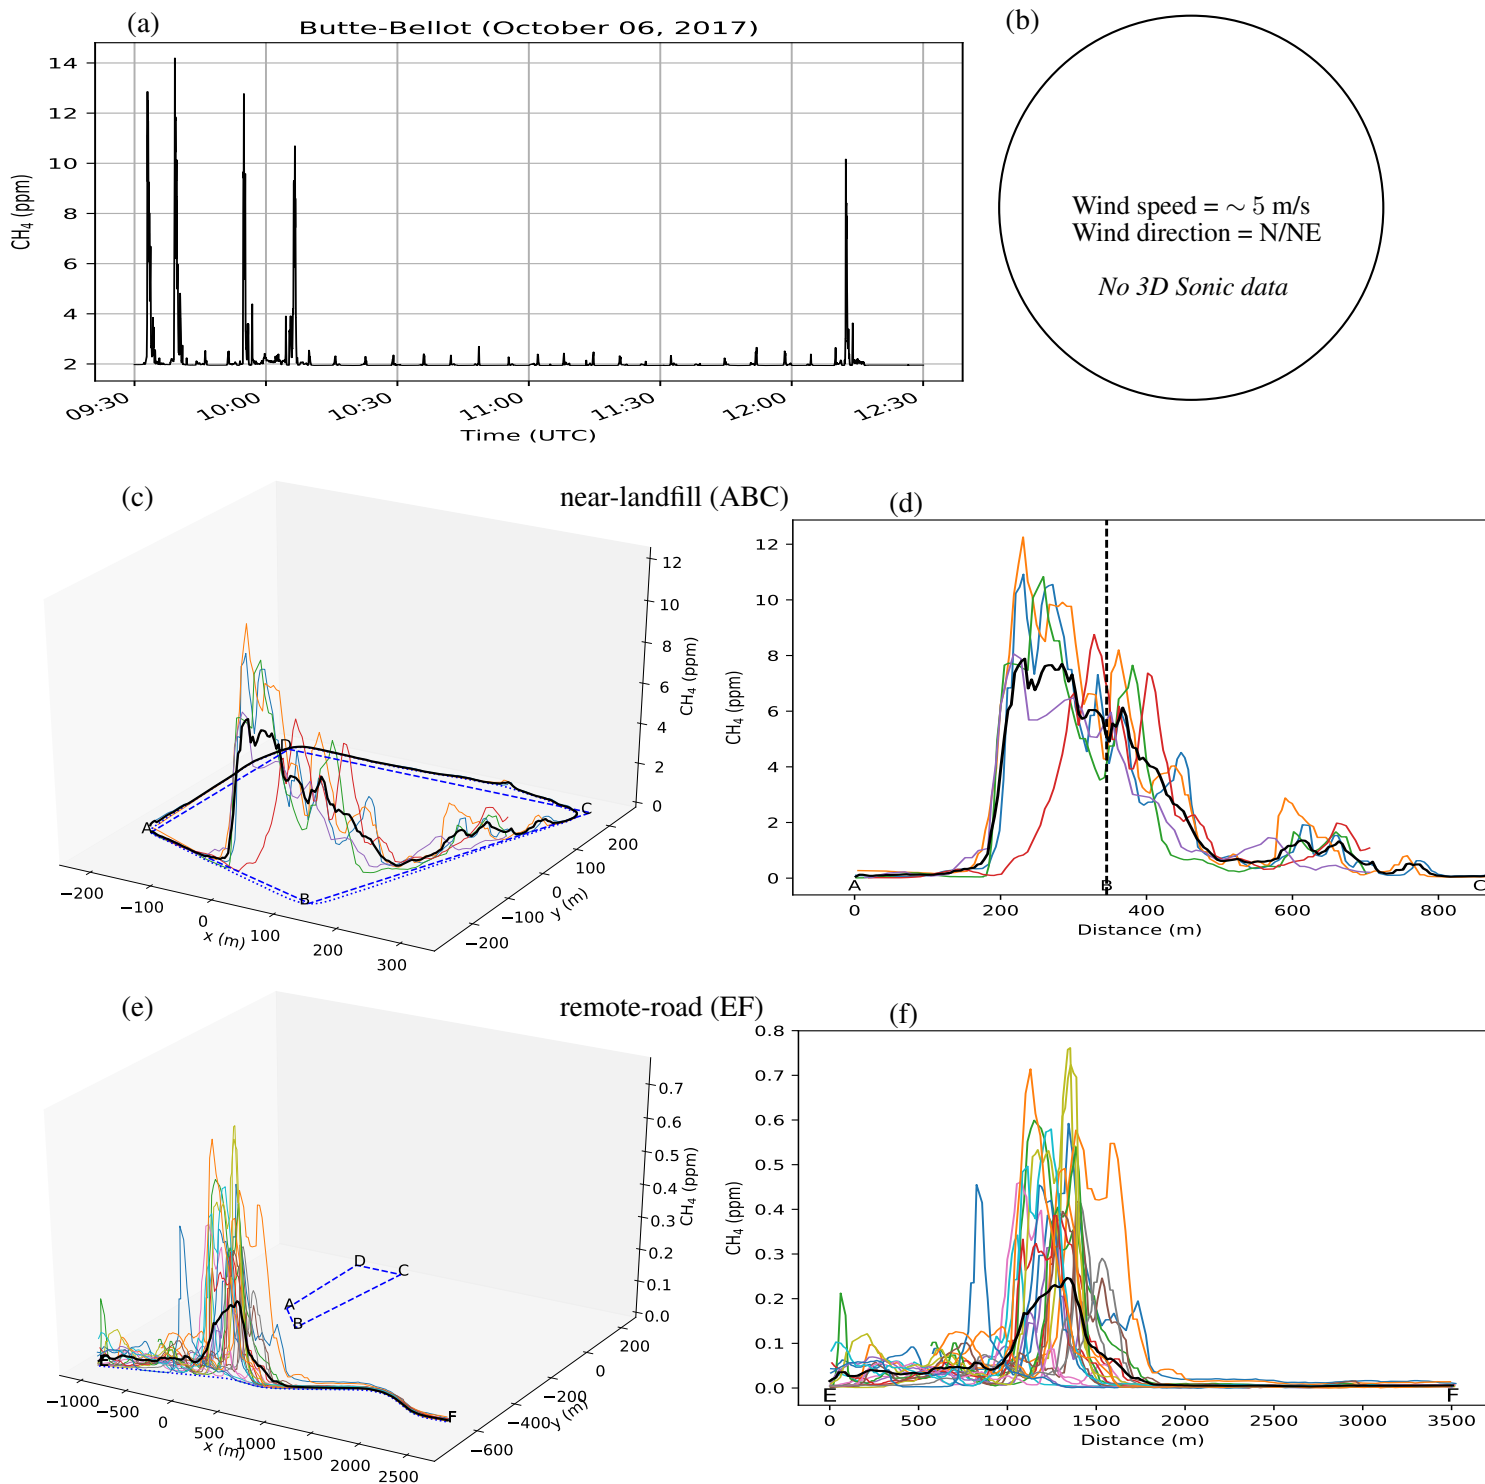

**Figure S1.5.** (a) CH<sub>4</sub> mole fraction time series from the mobile near-surface measurements and (b) wind conditions on **August 11, 2017**. Enhancement of CH<sub>4</sub> mole fractions above the background in plume transects (c) & (d) along the near-landfill (ABC) road and (e) & (f) far-landfill remote road (EF). The distances along road segments are computed from A and E respectively for near-landfill (ABC) and far-landfill (EF) roads. Black lines in (c)-(f) show the averaged mole fractions computed from these multiple transects.

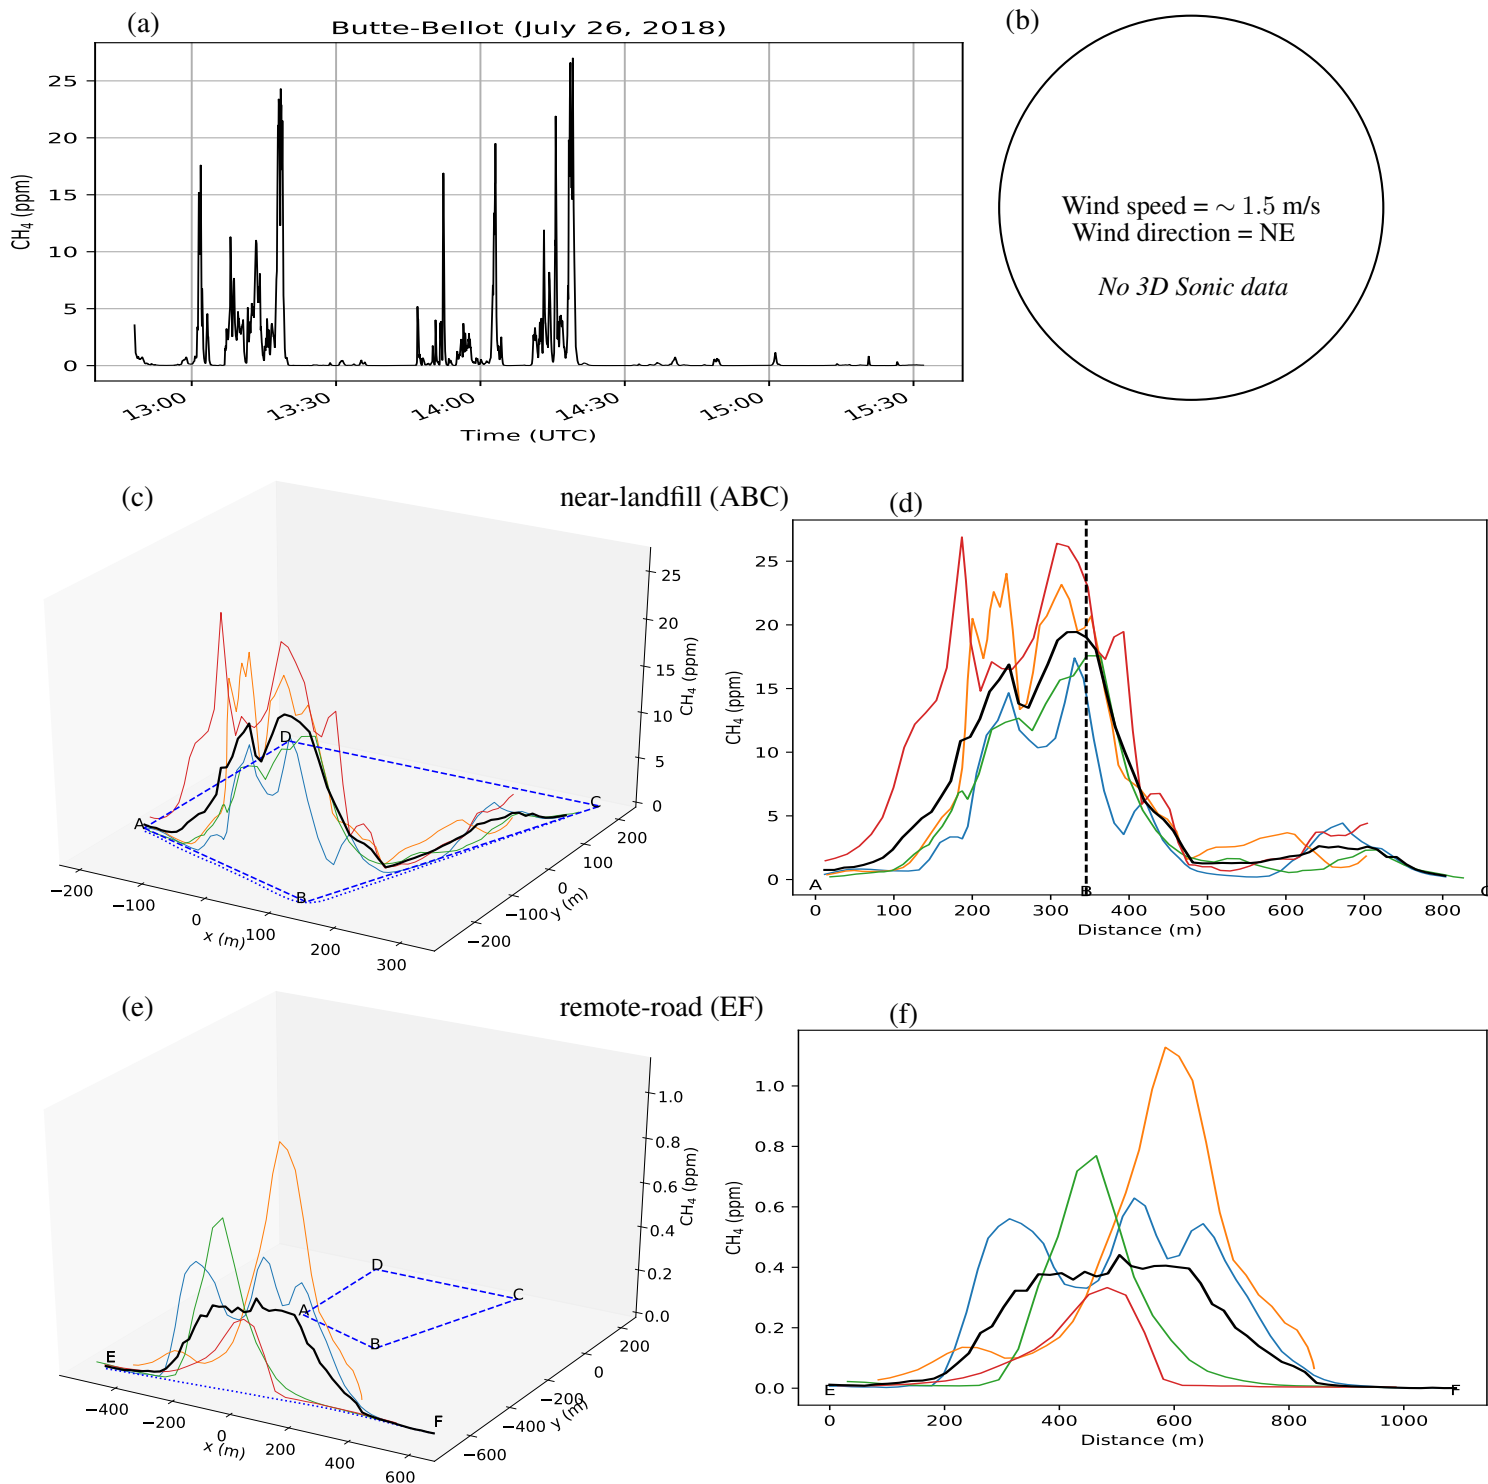

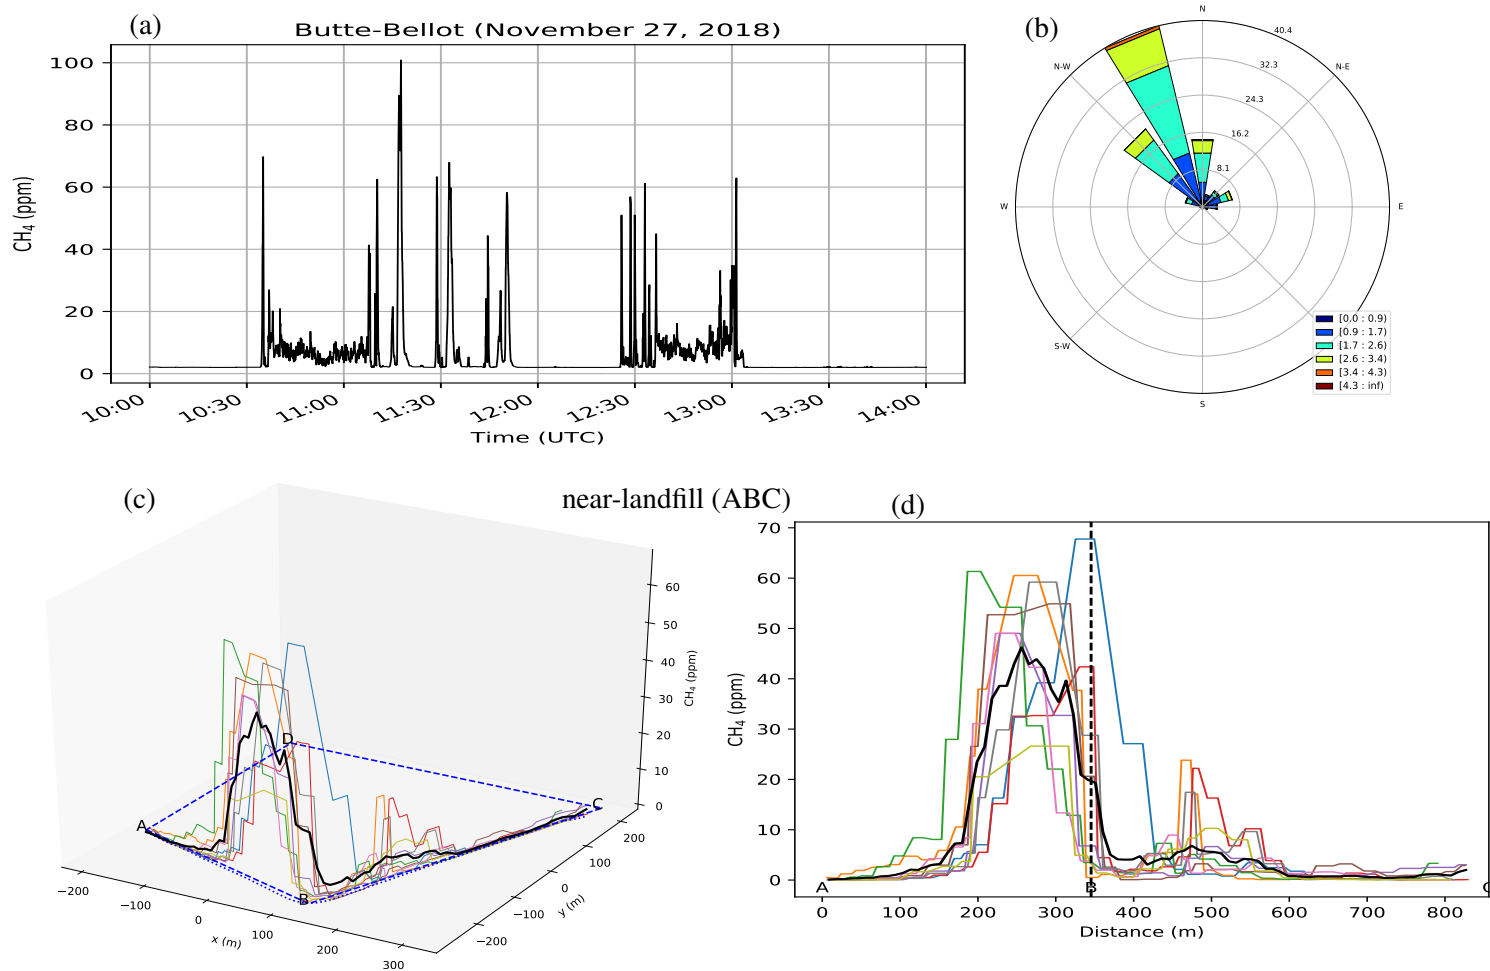

**Figure S1.6.** (a) CH<sub>4</sub> mole fraction time series from the mobile near-surface measurements and (b) wind conditions on **September 28, 2017**. Enhancement of CH<sub>4</sub> mole fractions above the background in plume transects (c) & (d) along the near-landfill (ABC) road. The distances along road segments are computed from A towards anticlockwise direction. Black lines in (c)-(d) show the averaged mole fractions computed from these multiple transects.

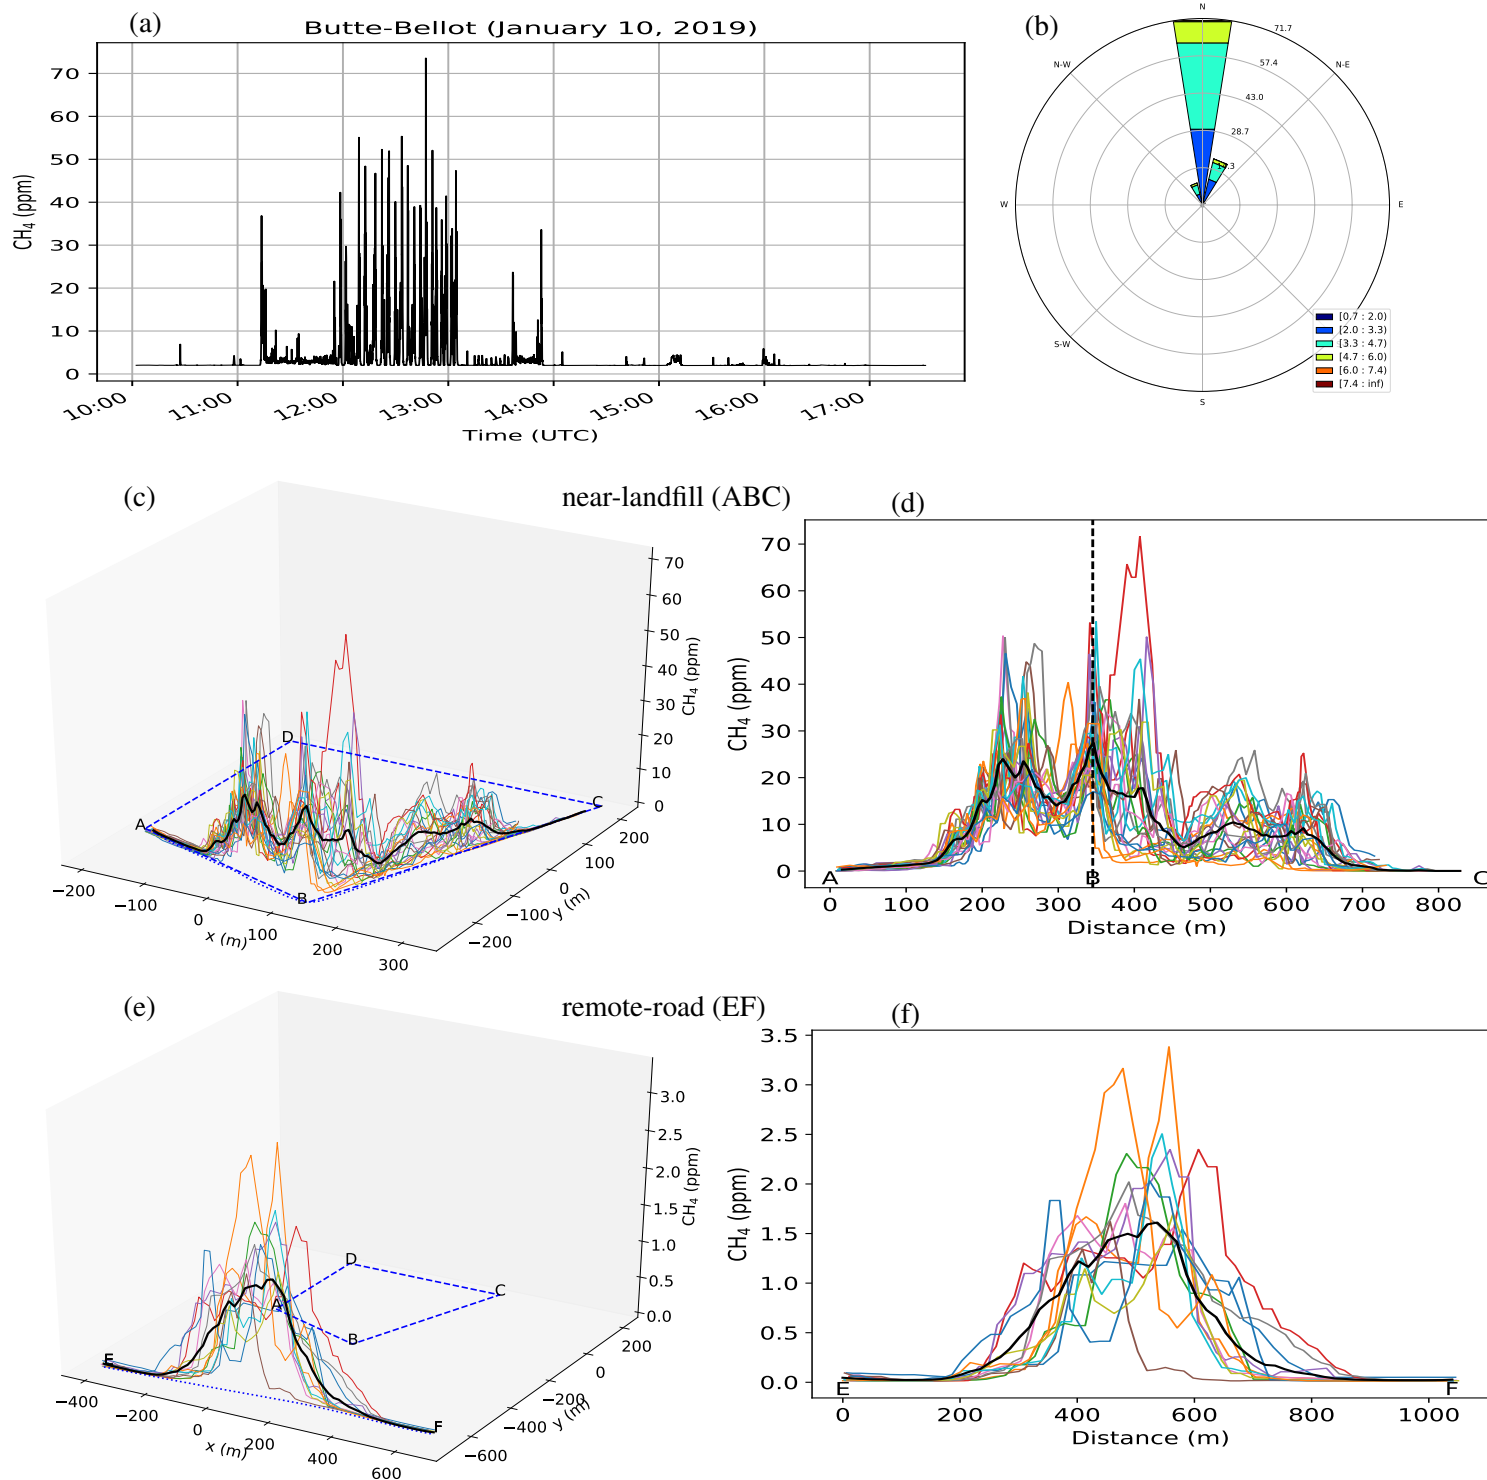

**Figure S1.7.** (a) CH<sub>4</sub> mole fraction time series from the mobile near-surface measurements and (b) wind conditions on **October 06, 2017**. Enhancement of CH<sub>4</sub> mole fractions above the background in plume transects (c) & (d) along the near-landfill (ABC) road and (e) & (f) far-landfill remote road (EF). The distances along road segments are computed from A and E respectively for near-landfill (ABC) and far-landfill (EF) roads. Black lines in (c)-(f) show the averaged mole fractions computed from these multiple transects.

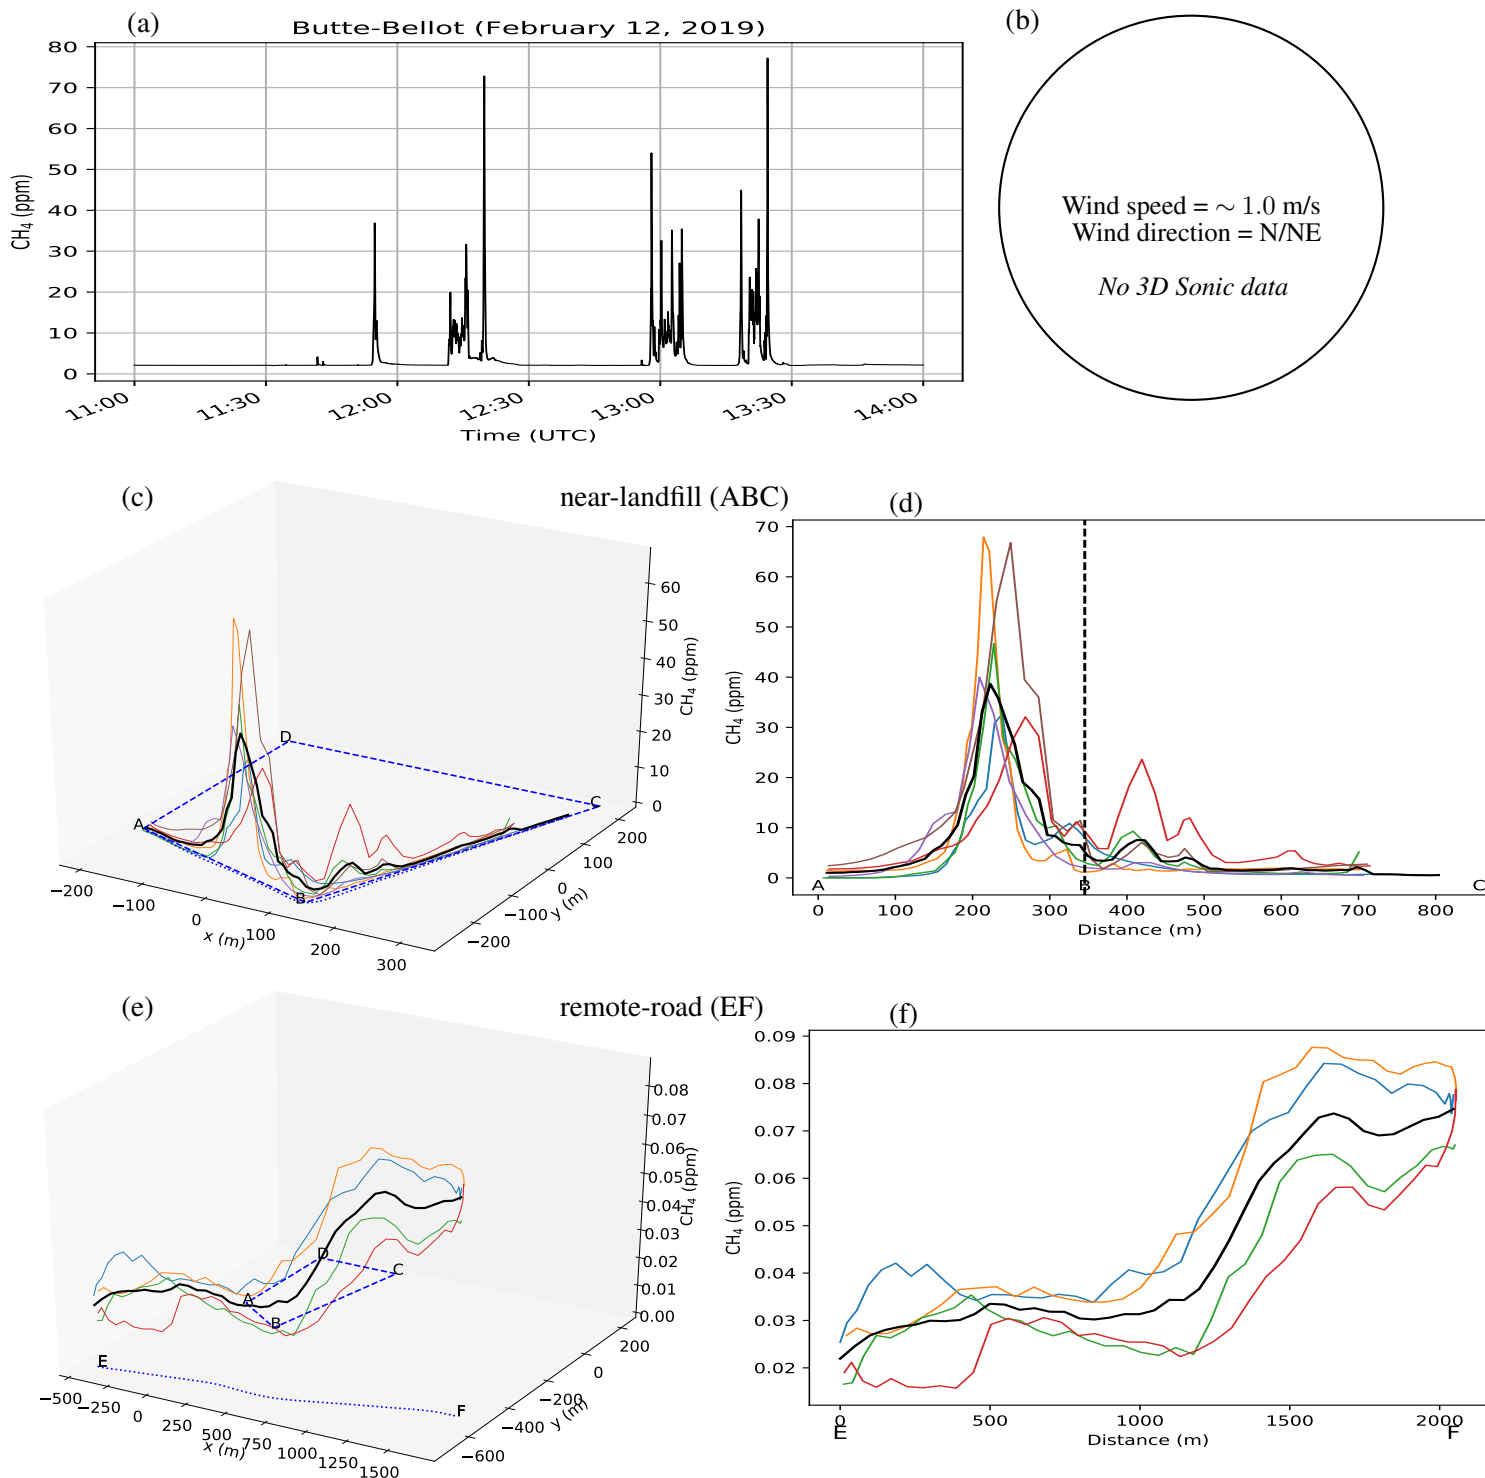

**Figure S1.8.** (a) CH<sub>4</sub> mole fraction time series from the mobile near-surface measurements and (b) wind conditions on **July 26, 2018**. Enhancement of CH<sub>4</sub> mole fractions above the background in plume transects (c) & (d) along the near-landfill (ABC) road and (e) & (f) far-landfill remote road (EF). The distances along road segments are computed from A and E respectively for near-landfill (ABC) and far-landfill (EF) roads. Black lines in (c)-(f) show the averaged mole fractions computed from these multiple transects.

**Figure S1.9.** (a)  $\text{CH}_4$  mole fraction time series from the mobile near-surface measurements and (b) wind rose on **November 27, 2018**. Enhancement of  $\text{CH}_4$  mole fractions above the background in plume transects (c) & (d) along the near-landfill (ABC) road. The distances along road segments are computed from A. Black lines in (c)-(d) show the averaged mole fractions computed from these multiple transects.

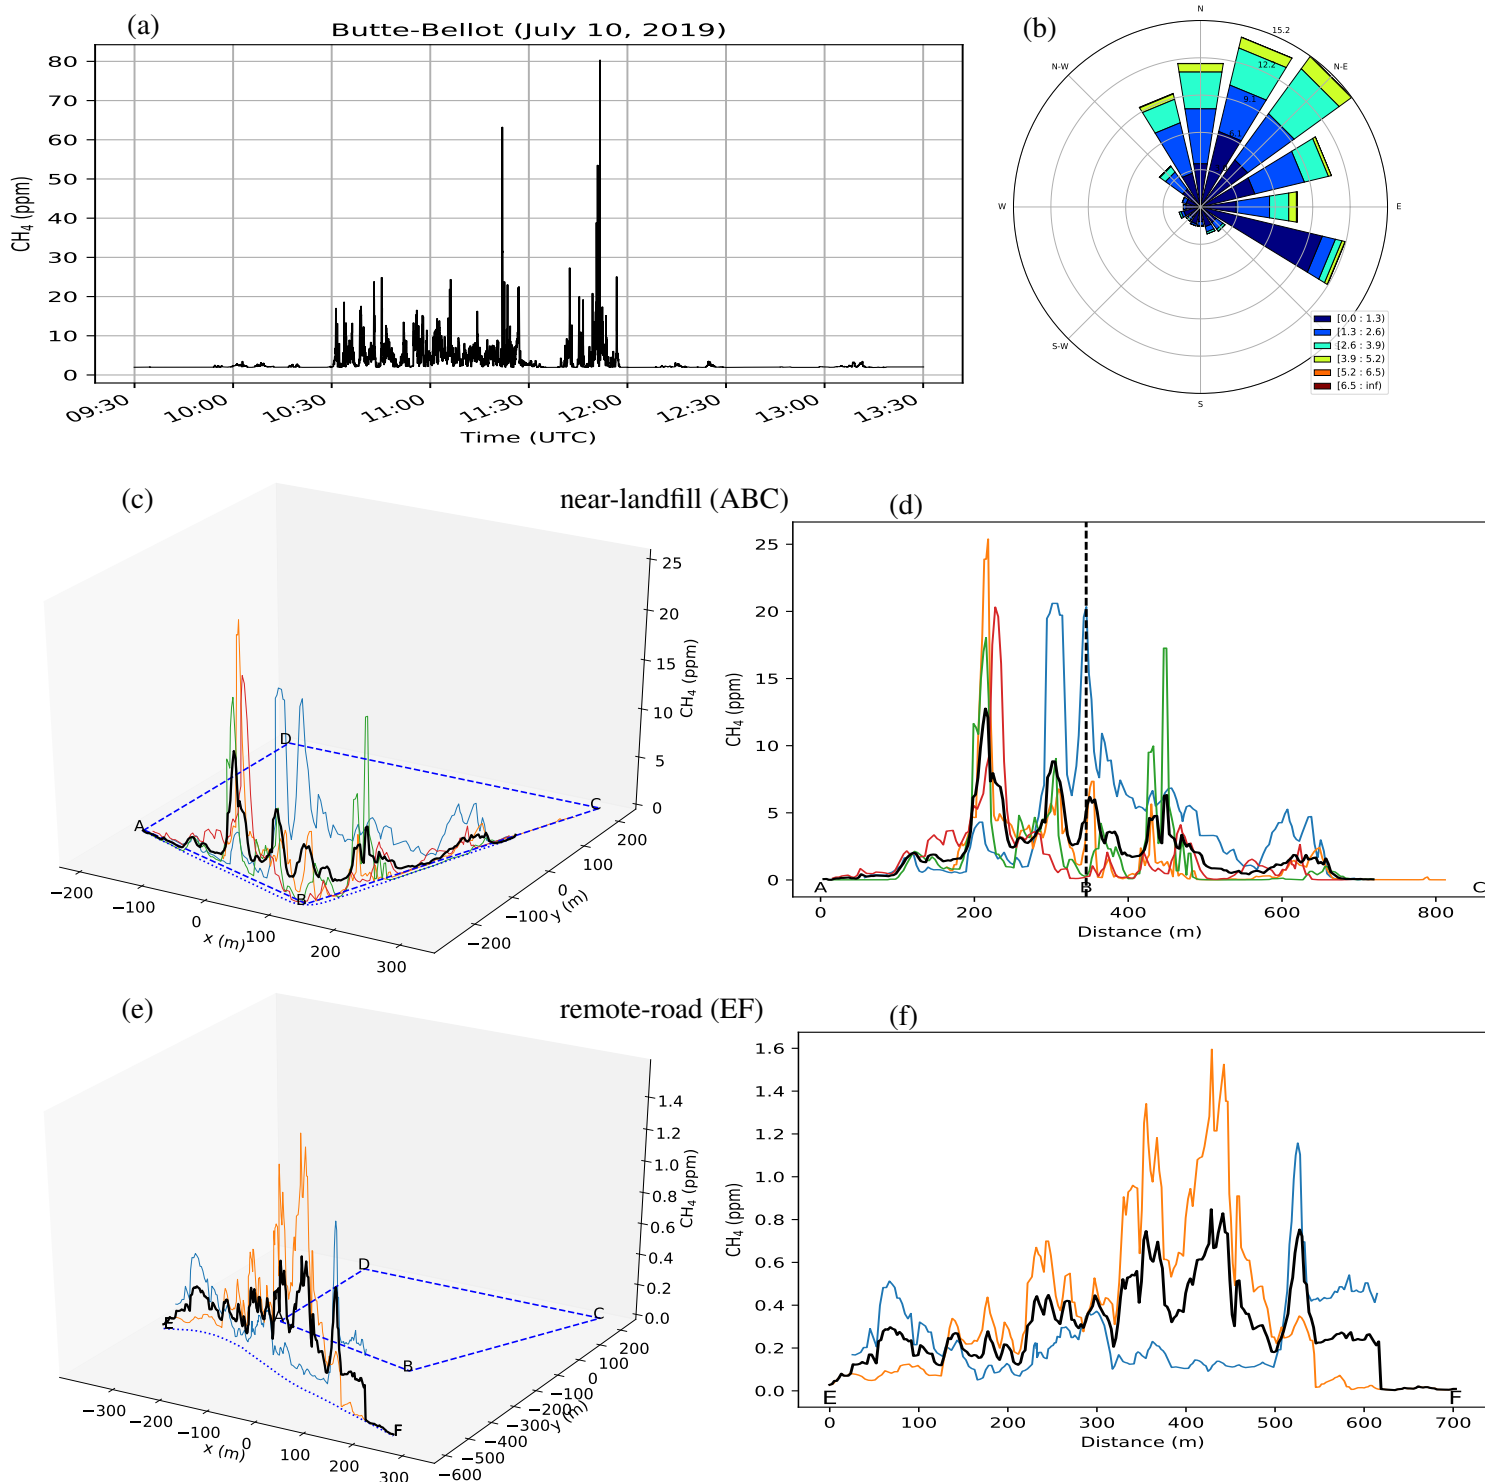

**Figure S1.10.** (a)  $\text{CH}_4$  mole fraction time series from the mobile near-surface measurements and (b) wind rose on **January 10, 2019**. Enhancement of  $\text{CH}_4$  mole fractions above the background in plume transects (c) & (d) along the near-landfill (ABC) road and (e) & (f) far-landfill remote road (EF). The distances along road segments are computed from A and E respectively for near-landfill (ABC) and far-landfill (EF) roads. Black lines in (c)-(f) show the averaged mole fractions computed from these multiple transects.

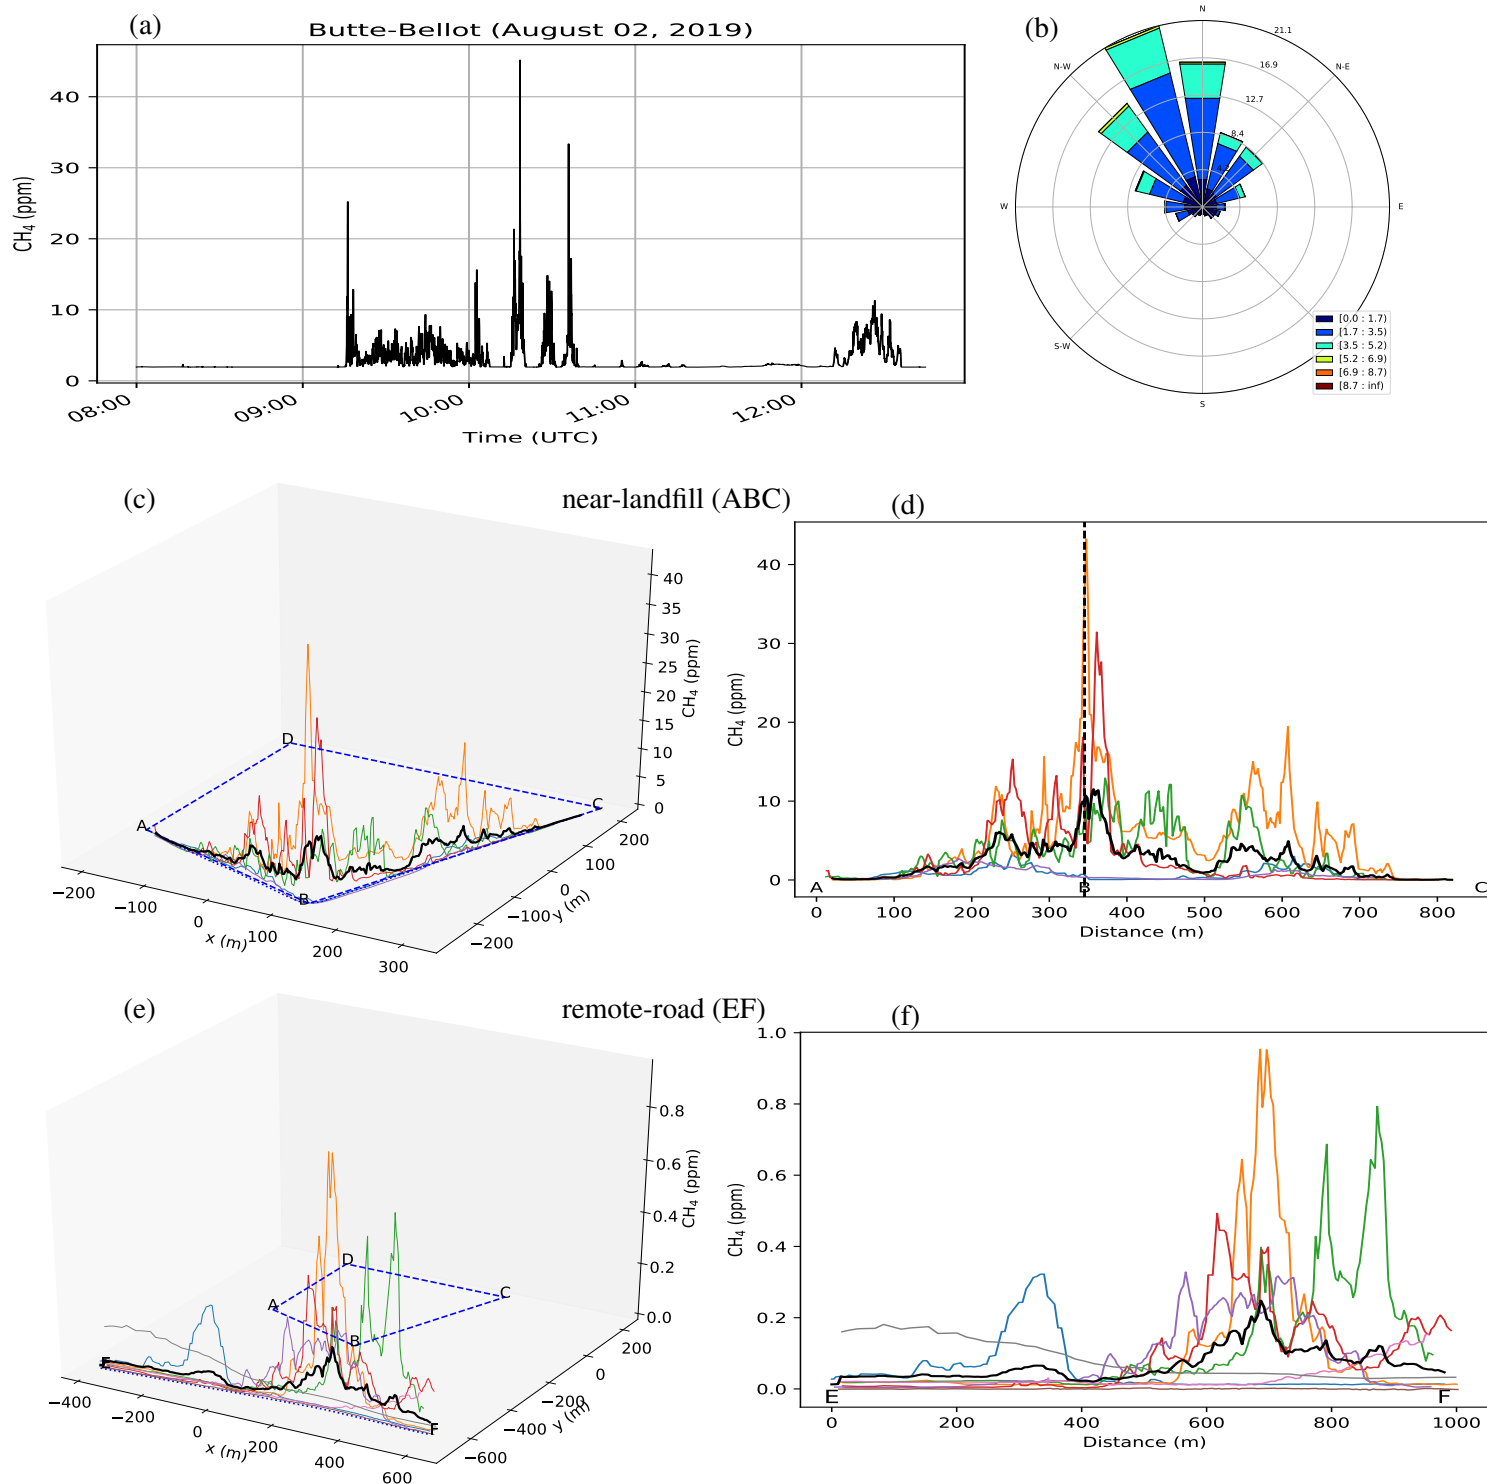

**Figure S1.11.** (a) CH<sub>4</sub> mole fraction time series from the mobile near-surface measurements and (b) wind conditions on **February 12, 2019**. Enhancement of CH<sub>4</sub> mole fractions above the background in plume transects (c) & (d) along the near-landfill (ABC) road and (e) & (f) far-landfill remote road (EF). The distances along road segments are computed from A and E respectively for near-landfill (ABC) and far-landfill (EF) roads. Black lines in (c)-(f) show the averaged mole fractions computed from these multiple transects.

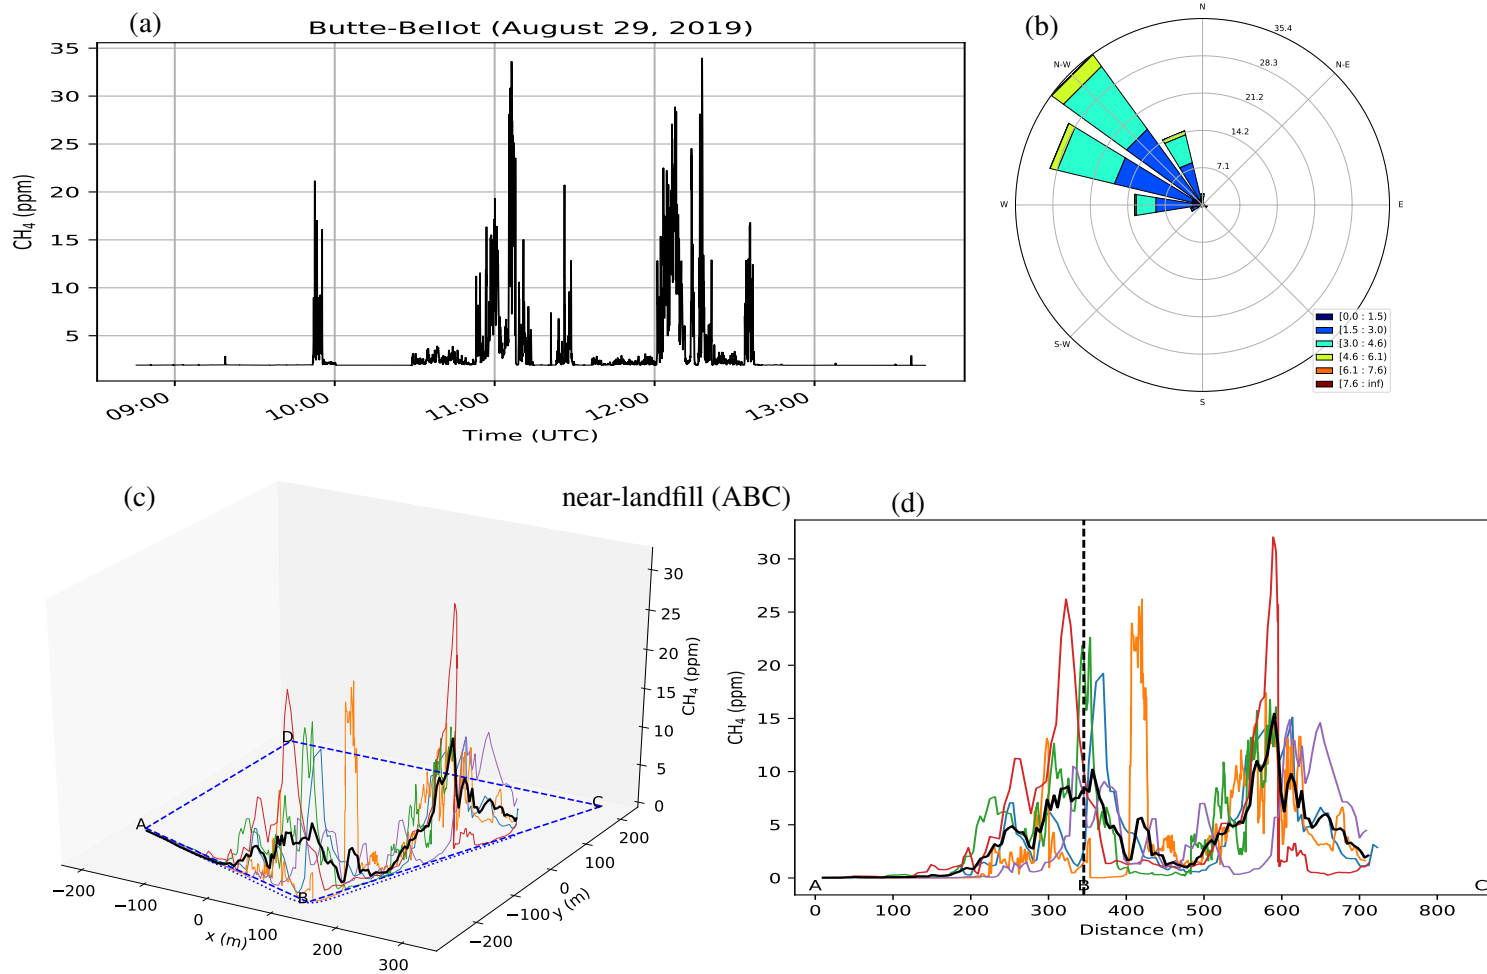

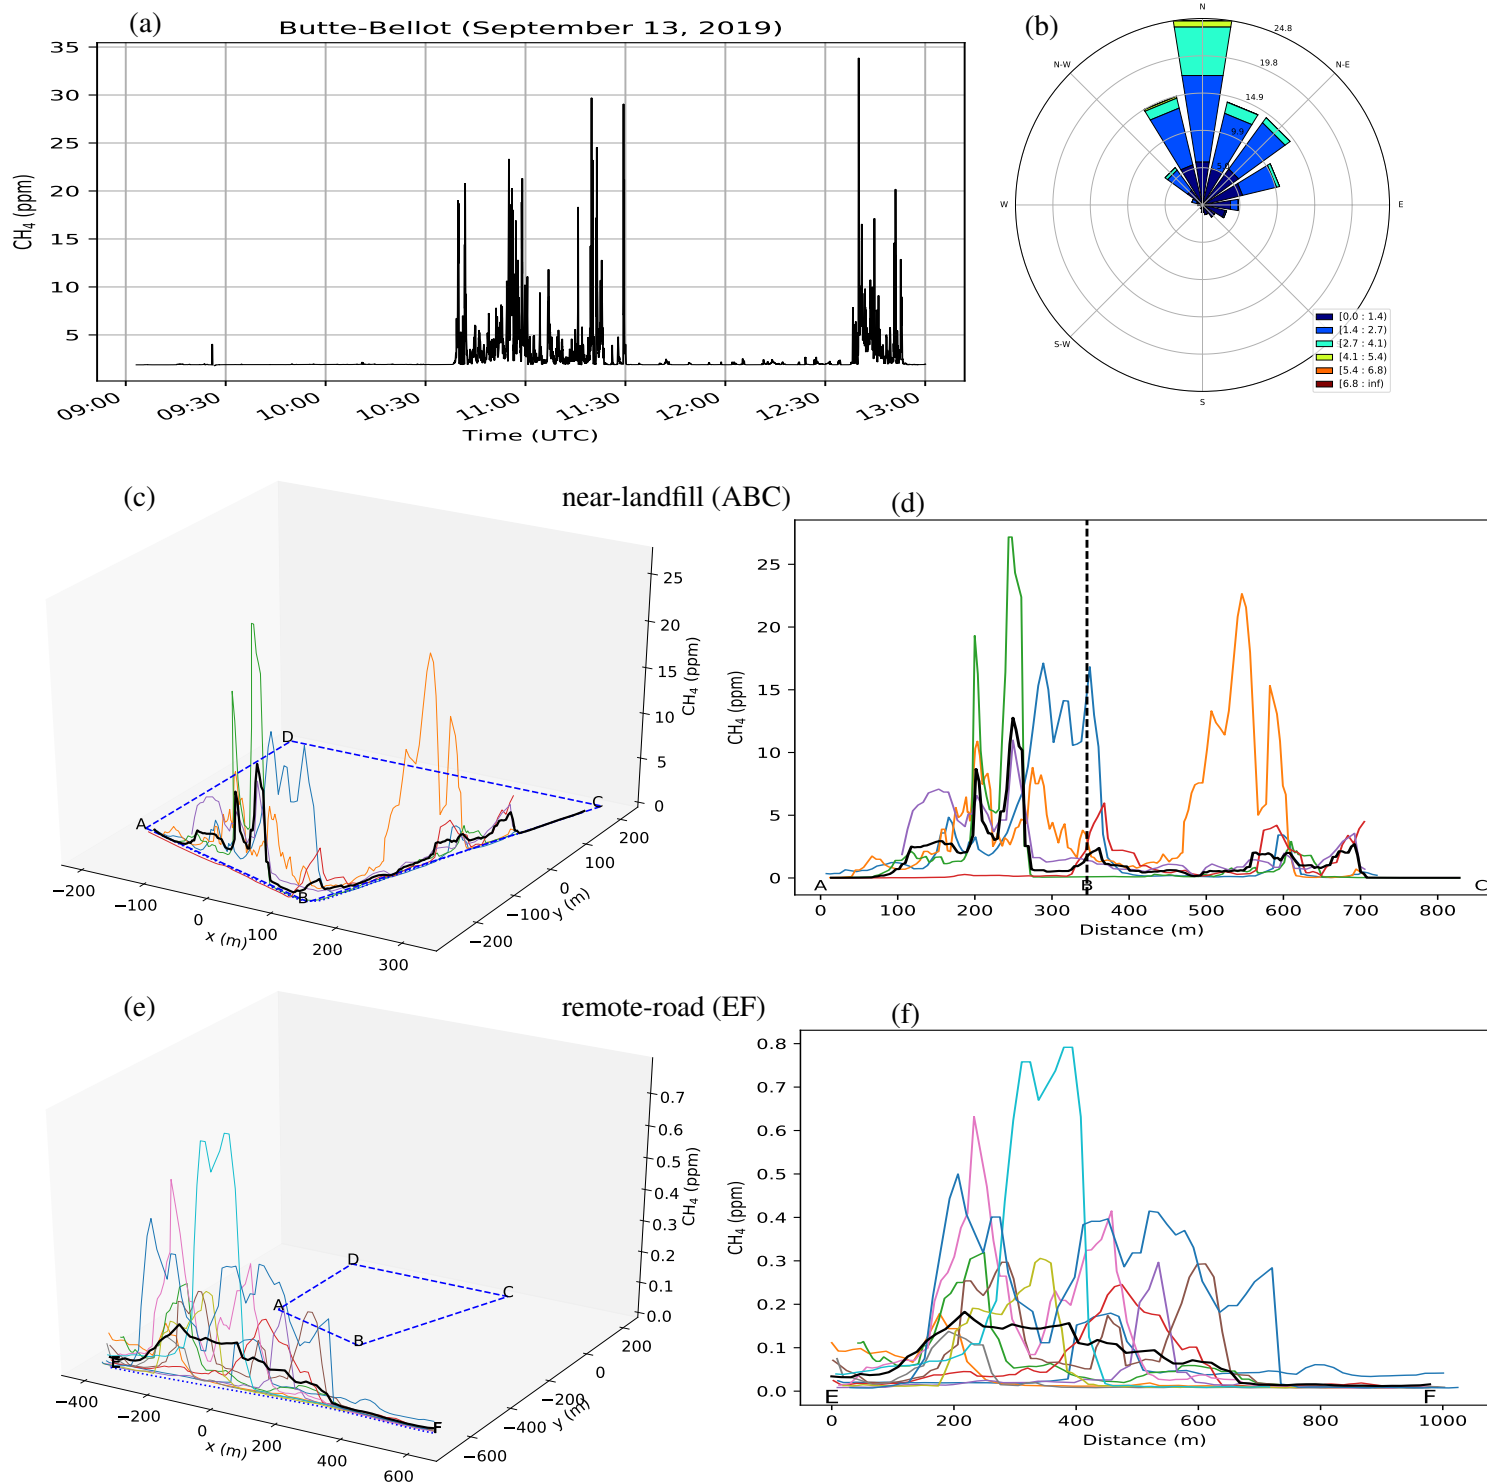

**Figure S1.12.** (a)  $\text{CH}_4$  mole fraction time series from the mobile near-surface measurements and (b) wind rose on **July 10, 2019**. Enhancement of  $\text{CH}_4$  mole fractions above the background in plume transects (c) & (d) along the near-landfill (ABC) road and (e) & (f) far-landfill remote road (EF). The distances along road segments are computed from A and E respectively for near-landfill (ABC) and far-landfill (EF) roads. Black lines in (c)-(f) show the averaged mole fractions computed from these multiple transects.

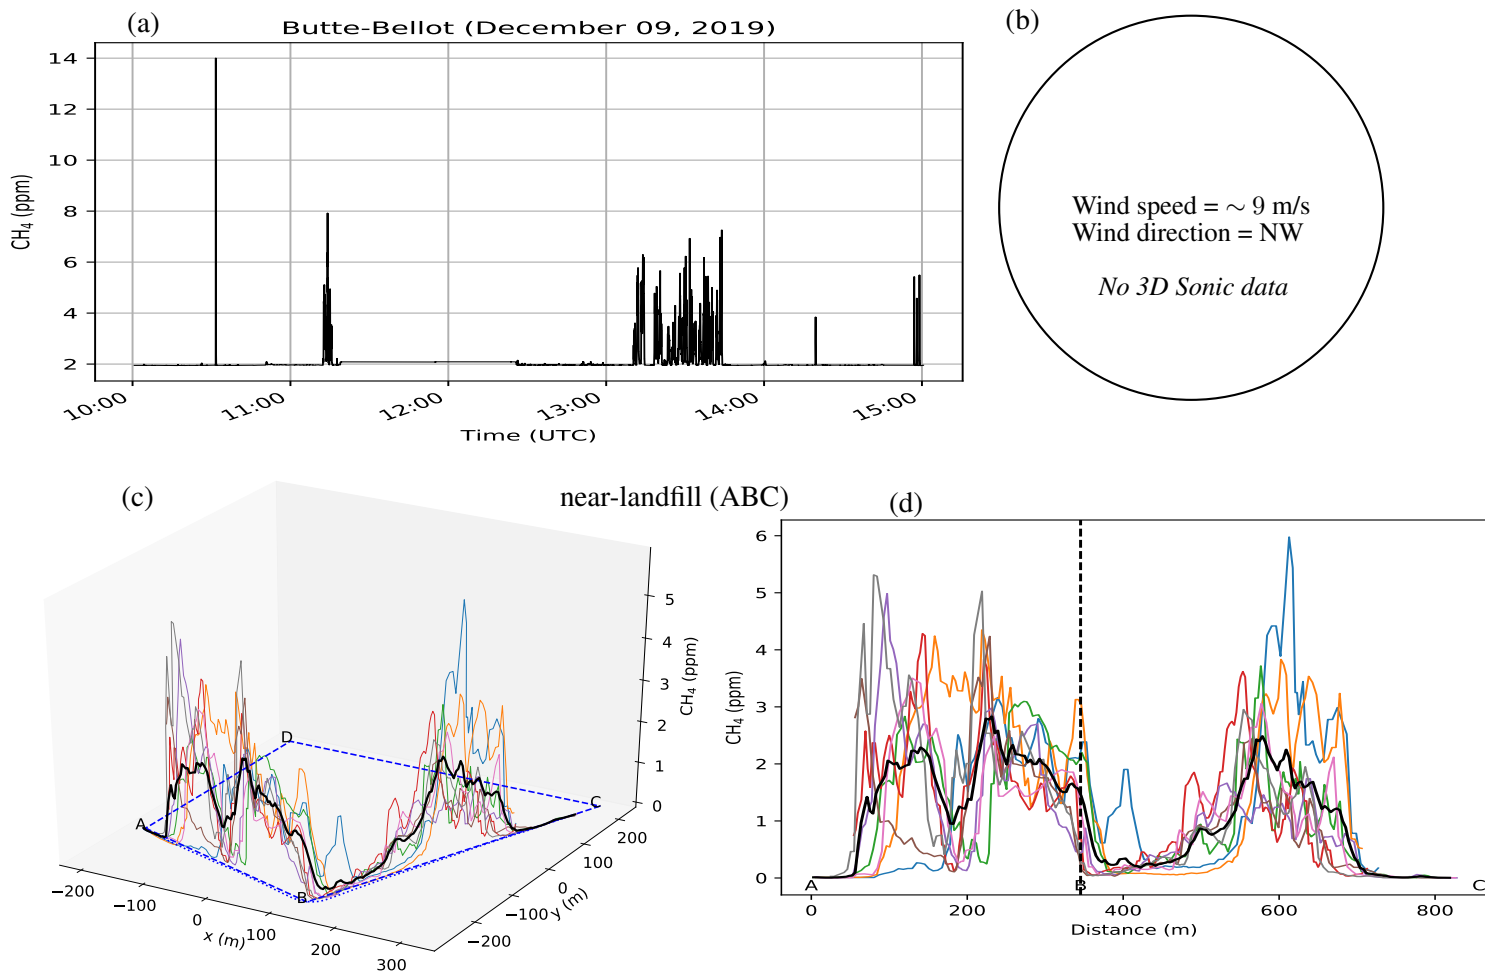

**Figure S1.13.** (a)  $\text{CH}_4$  mole fraction time series from the mobile near-surface measurements and (b) wind rose on **August 02, 2019**. Enhancement of  $\text{CH}_4$  mole fractions above the background in plume transects (c) & (d) along the near-landfill (ABC) road and (e) & (f) far-landfill remote road (EF). The distances along road segments are computed from A and E respectively for near-landfill (ABC) and far-landfill (EF) roads. Black lines in (c)-(f) show the averaged mole fractions computed from these multiple transects.

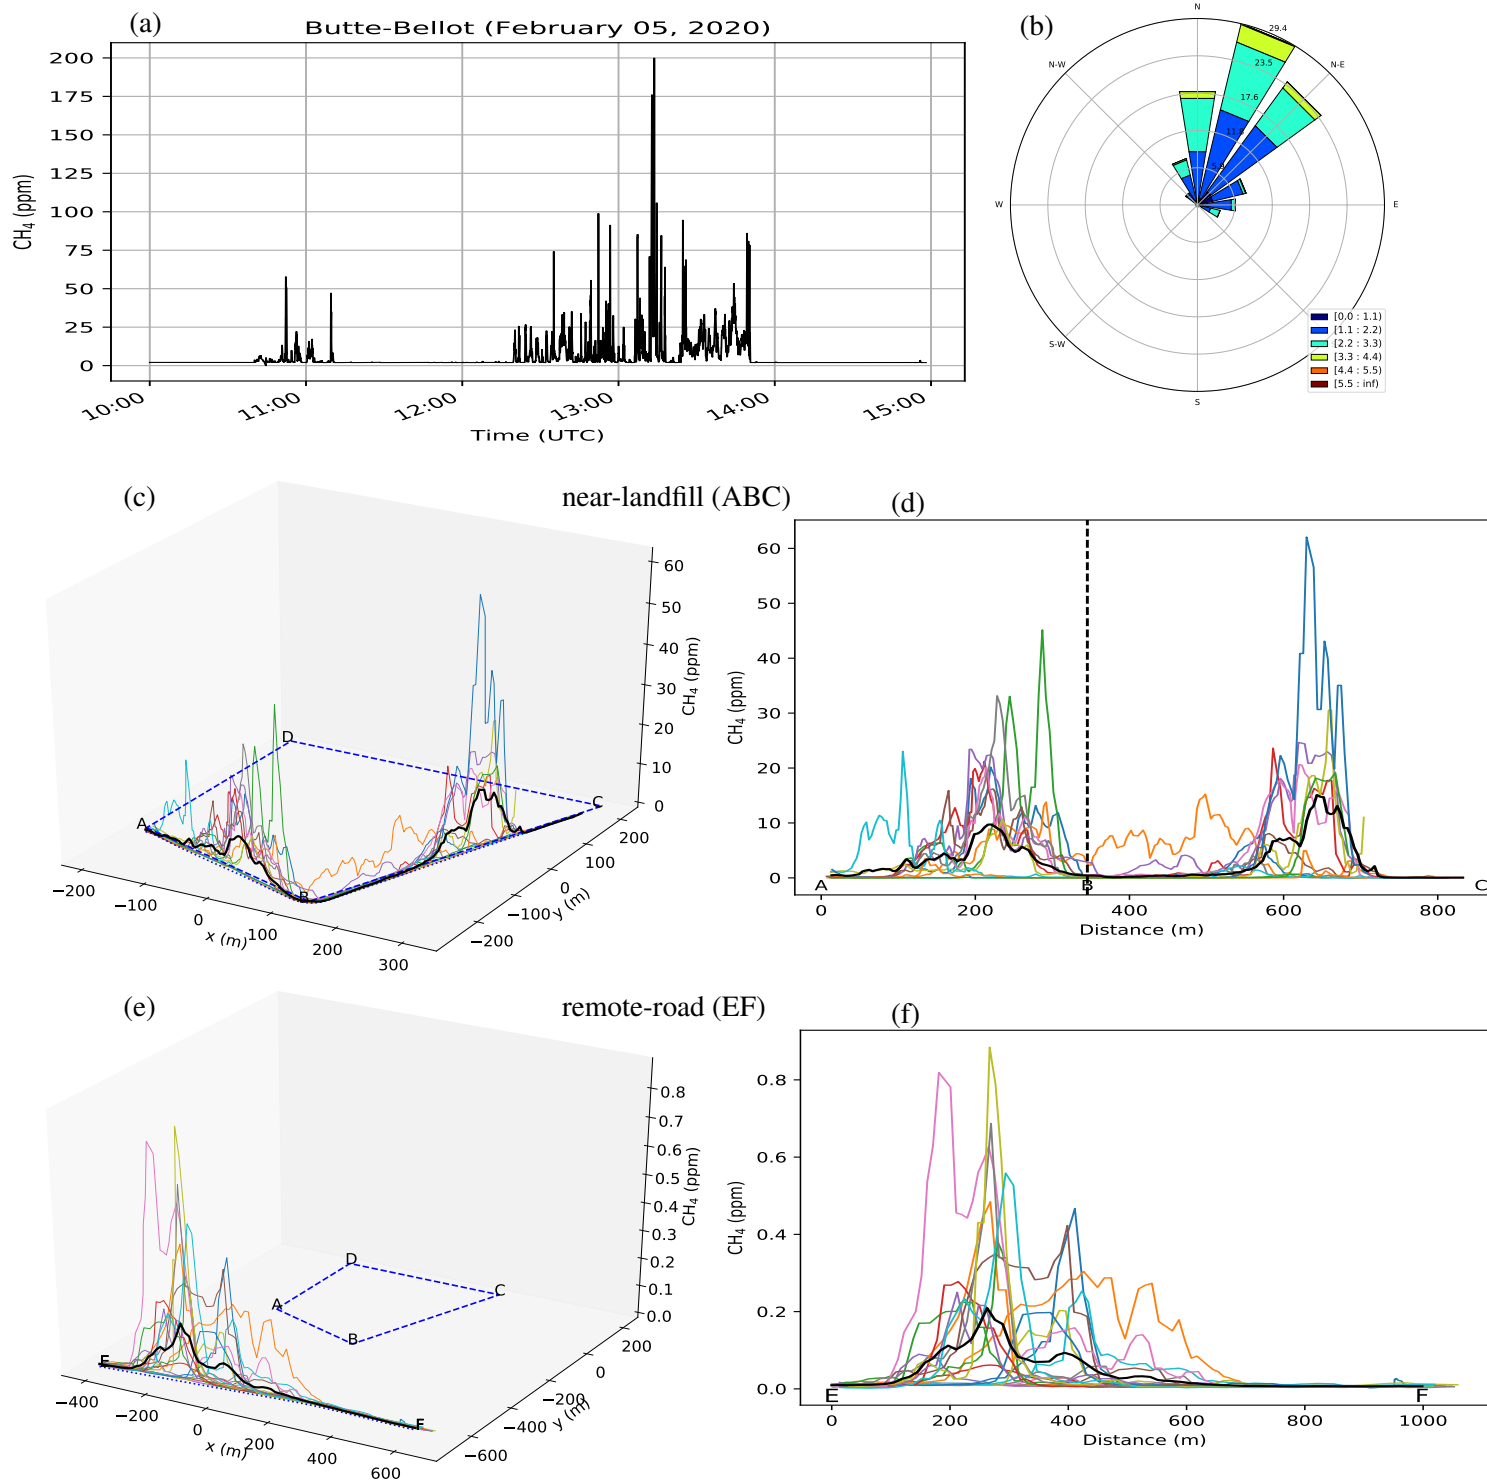

**Figure S1.14.** (a) CH<sub>4</sub> mole fraction time series from the mobile near-surface measurements and (b) wind rose on **August 29, 2019**. Enhancement of CH<sub>4</sub> mole fractions above the background in plume transects (c) & (d) along the near-landfill (ABC) road. The distances along road segments are computed from A. Black lines in (c)-(d) show the averaged mole fractions computed from these multiple transects.

**Figure S1.15.** (a) CH<sub>4</sub> mole fraction time series from the mobile near-surface measurements and (b) wind rose on **September 13, 2019**. Enhancement of CH<sub>4</sub> mole fractions above the background in plume transects (c) & (d) along the near-landfill (ABC) road and (e) & (f) far-landfill remote road (EF). The distances along road segments are computed from A and E respectively for near-landfill (ABC) and far-landfill (EF) roads. Black lines in (c)-(f) show the averaged mole fractions computed from these multiple transects.

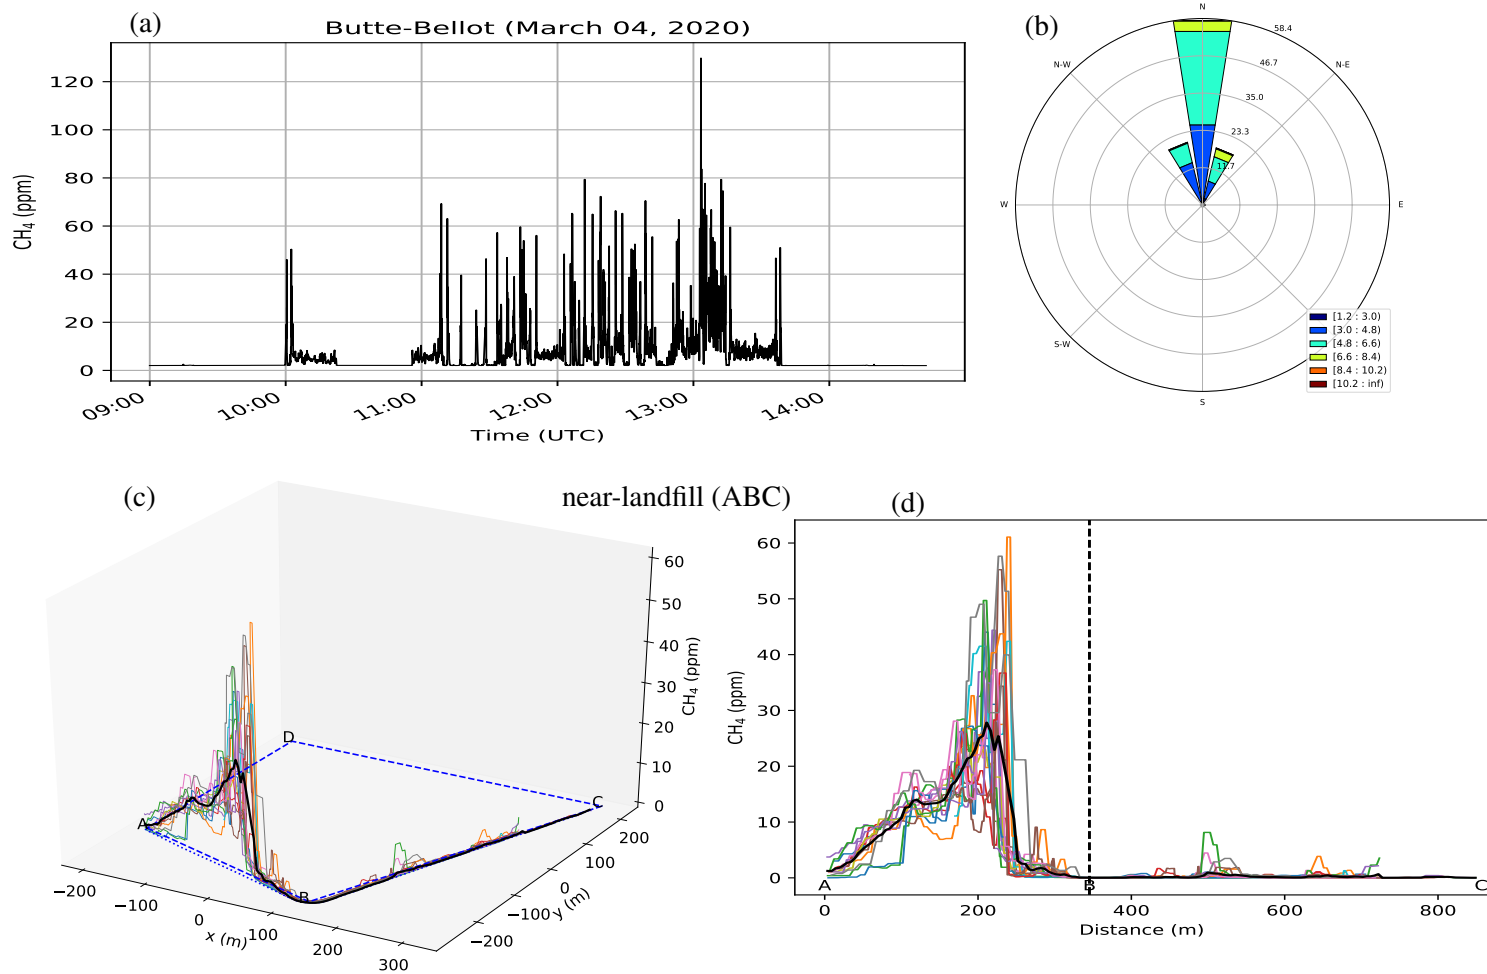

**Figure S1.16.** (a) CH<sub>4</sub> mole fraction time series from the mobile near-surface measurements and (b) wind rose on **December 09, 2019**. Enhancement of CH<sub>4</sub> mole fractions above the background in plume transects (c) & (d) along the near-landfill (ABC) road and (e) & (f) far-landfill remote road (EF). The distances along road segments are computed from A and E respectively for near-landfill (ABC) and far-landfill (EF) roads. Black lines in (c)-(f) show the averaged mole fractions computed from these multiple transects.

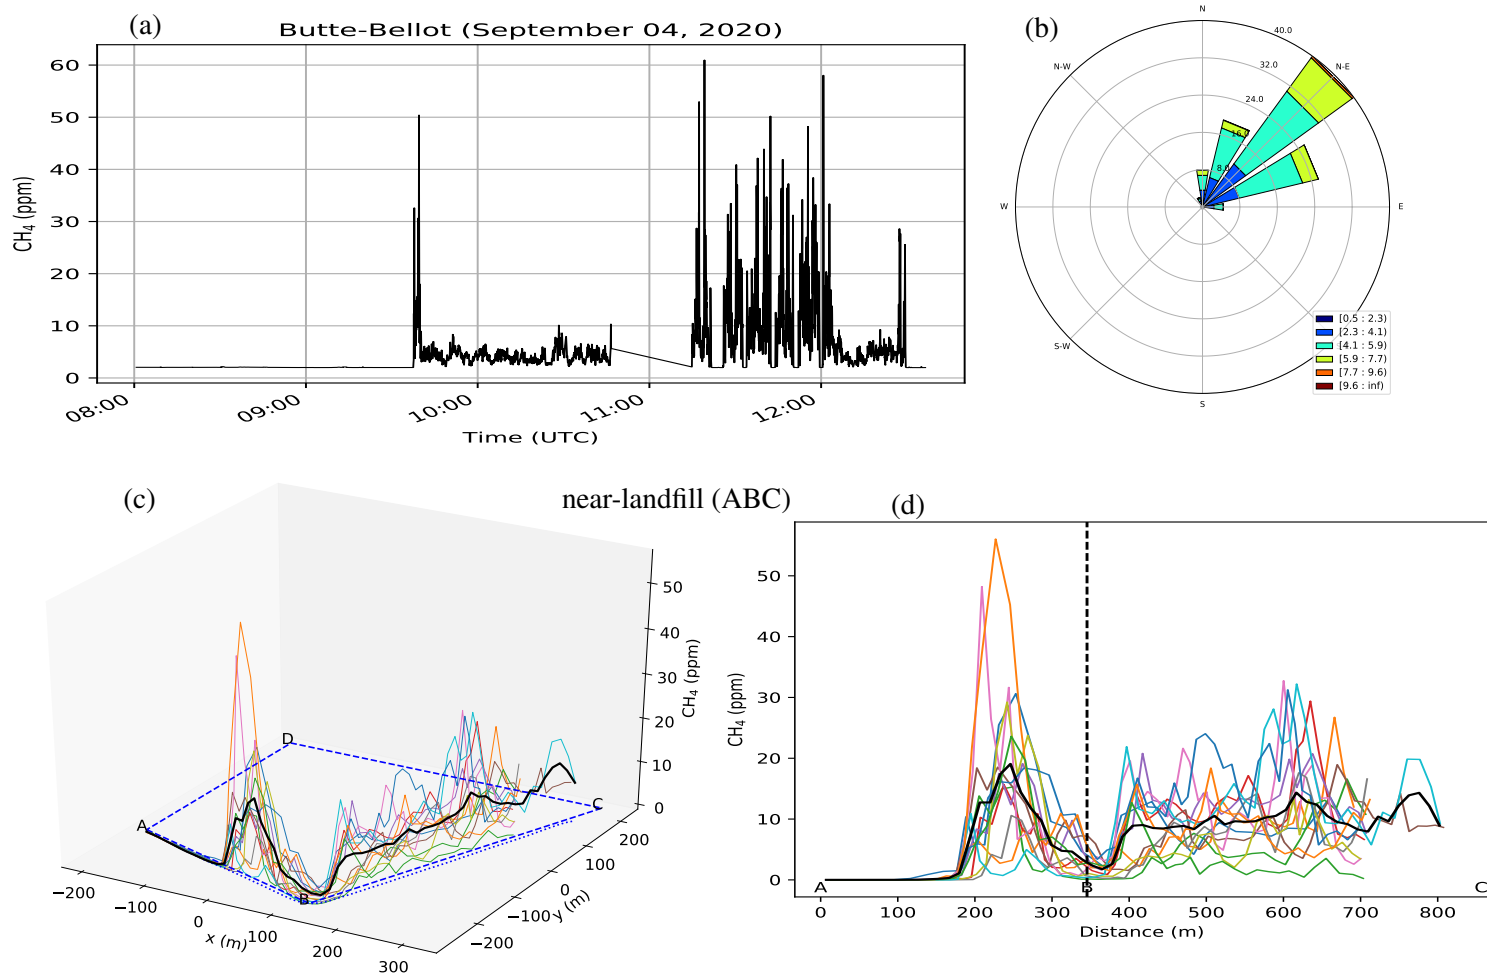

**Figure S1.17.** (a)  $\text{CH}_4$  mole fraction time series from the mobile near-surface measurements and (b) wind rose on **February 05, 2020**. Enhancement of  $\text{CH}_4$  mole fractions above the background in plume transects (c) & (d) along the near-landfill (ABC) road and (e) & (f) far-landfill remote road (EF). The distances along road segments are computed from A and E respectively for near-landfill (ABC) and far-landfill (EF) roads. Black lines in (c)-(f) show the averaged mole fractions computed from these multiple transects.

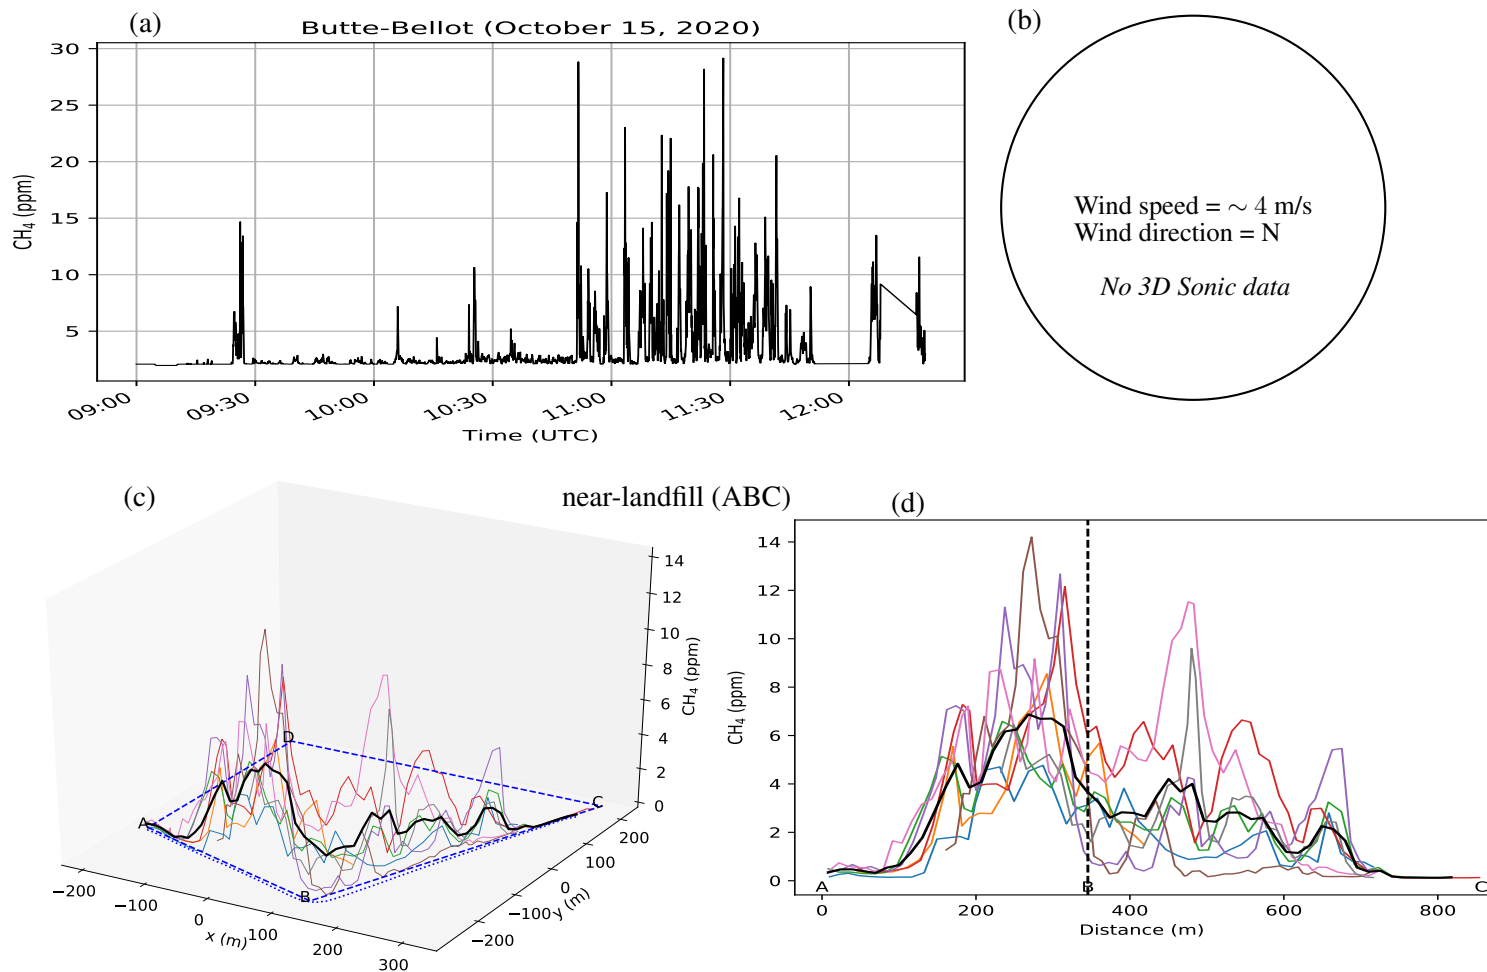

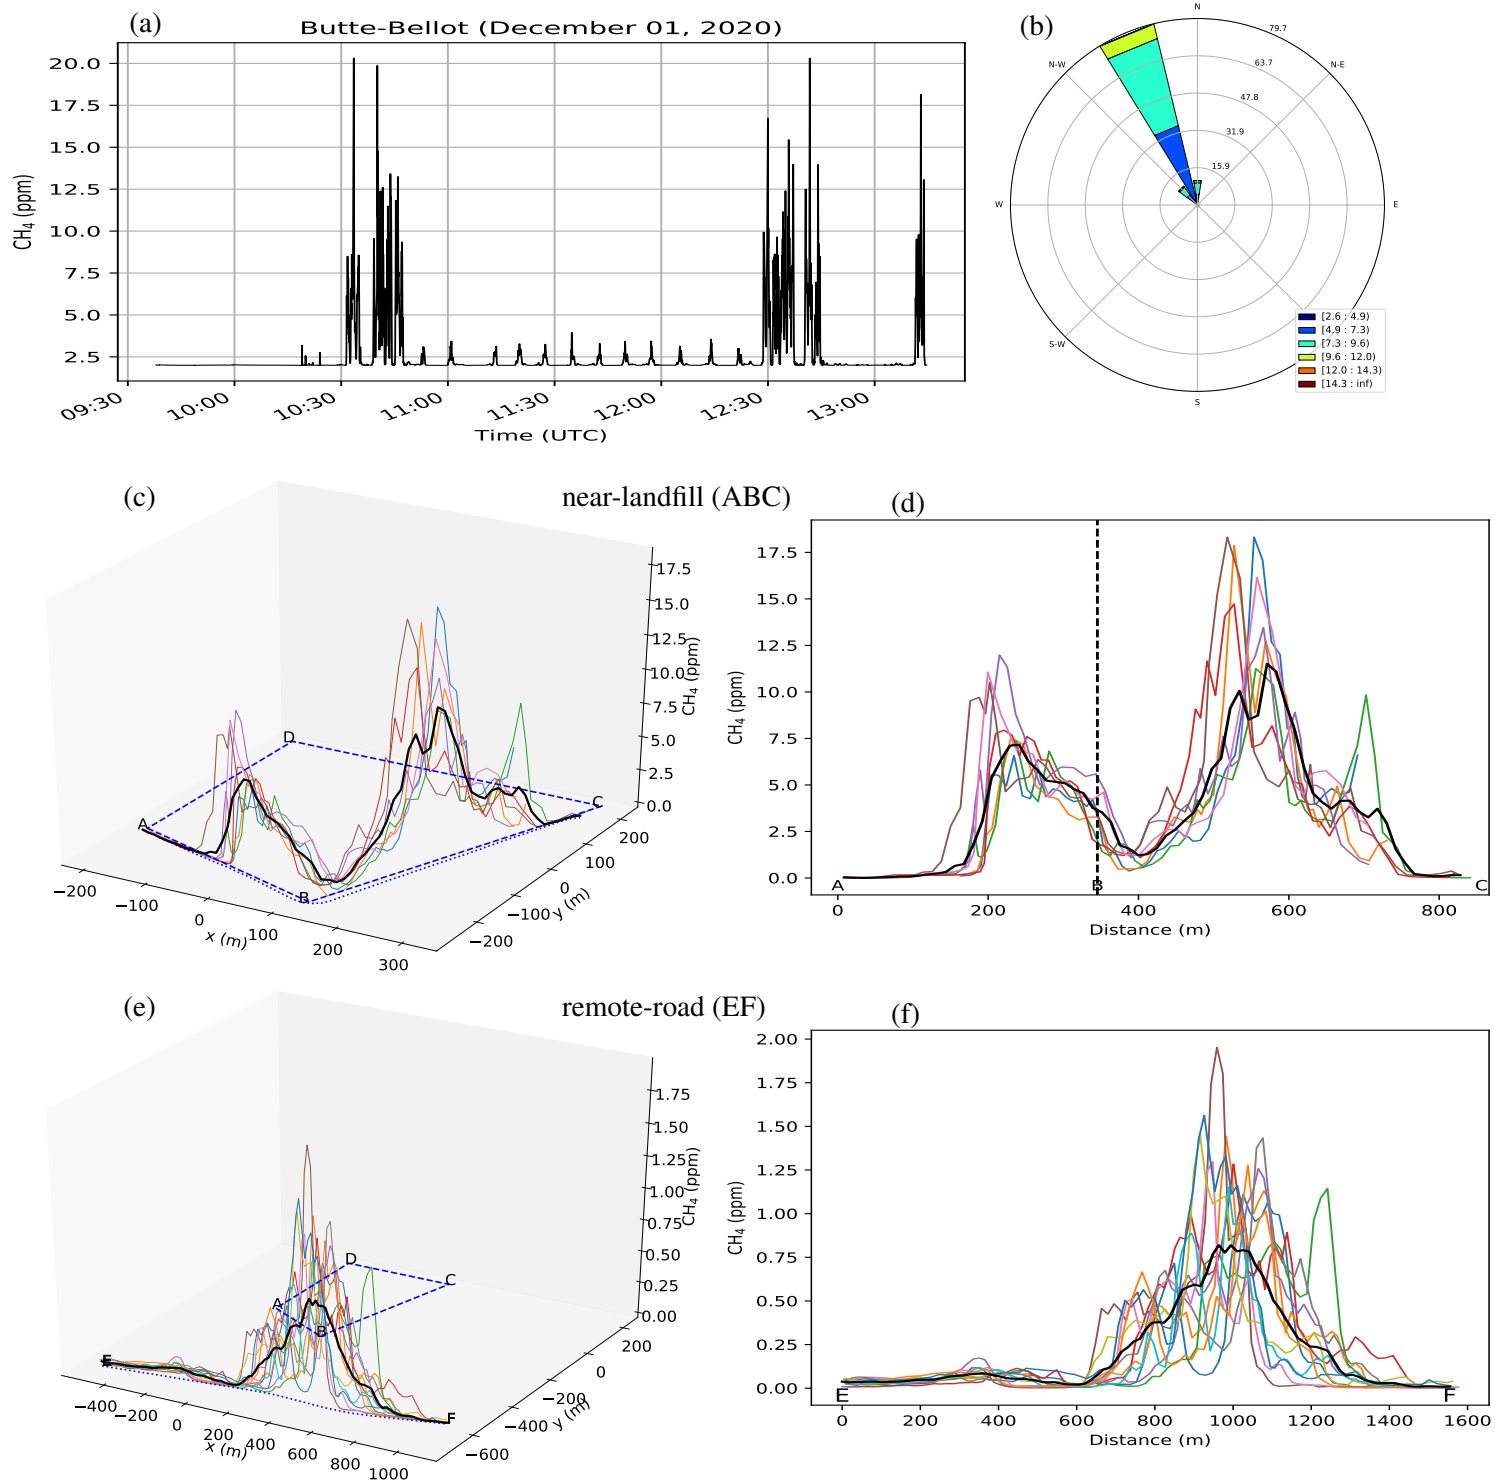

**Figure S1.18.** (a) CH<sub>4</sub> mole fraction time series from the mobile near-surface measurements and (b) wind rose on **March 04, 2020**. Enhancement of CH<sub>4</sub> mole fractions above the background in plume transects (c) & (d) along the near-landfill (ABC) road. The distances along road segments are computed from A for near-landfill (ABC) road. Black lines in (c)-(d) show the averaged mole fractions computed from these multiple transects.

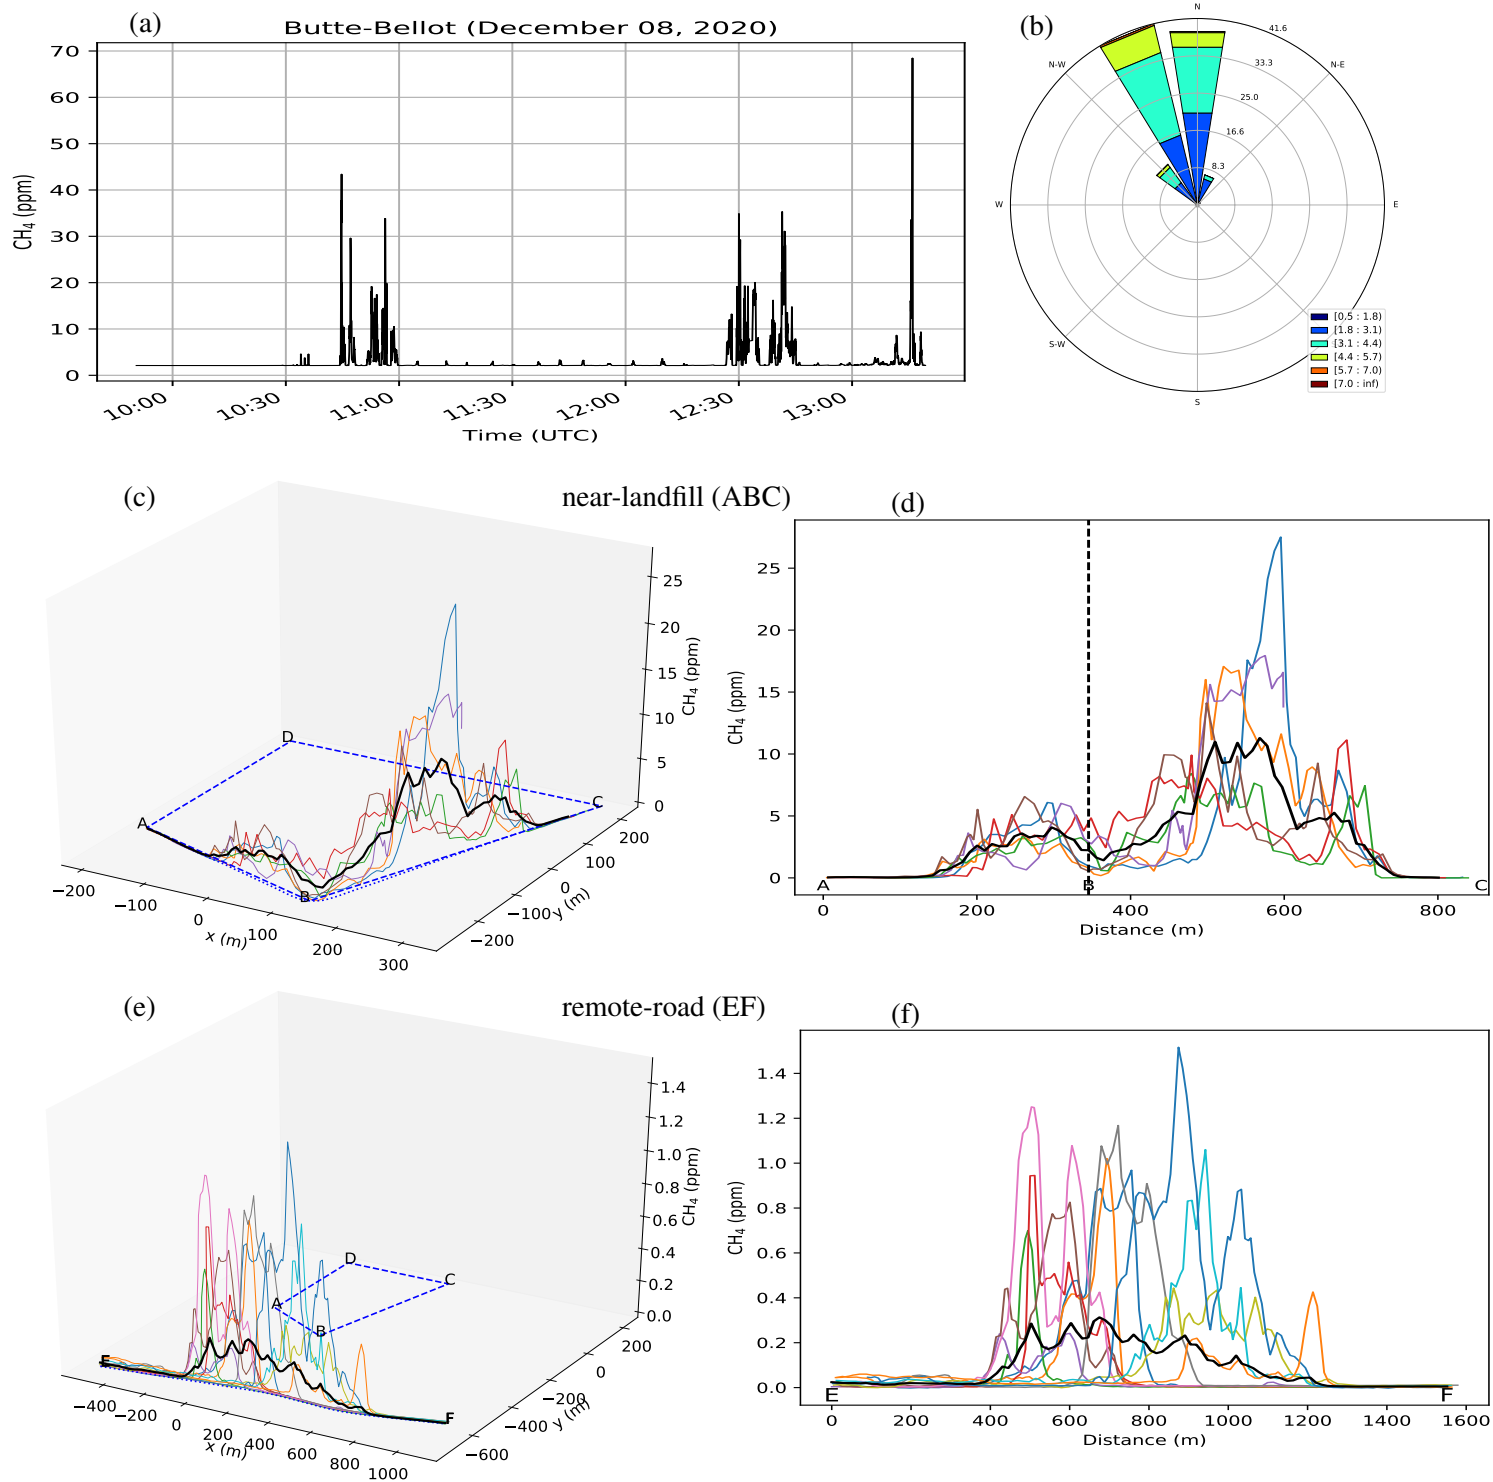

**Figure S1.19.** (a) CH<sub>4</sub> mole fraction time series from the mobile near-surface measurements and (b) wind rose on **September 04, 2020**. Enhancement of CH<sub>4</sub> mole fractions above the background in plume transects (c) & (d) along the near-landfill (ABC) road. The distances along road segments are computed from A for near-landfill (ABC) road. Black lines in (c)-(d) show the averaged mole fractions computed from these multiple transects.

**Figure S1.20.** (a)  $\text{CH}_4$  mole fraction time series from the mobile near-surface measurements and (b) wind conditions on **October 15, 2020**. Enhancement of  $\text{CH}_4$  mole fractions above the background in plume transects (c) & (d) along the near-landfill (ABC) road. The distances along road segments are computed from A for near-landfill (ABC) road. Black lines in (c)-(d) show the averaged mole fractions computed from these multiple transects.

**Figure S1.21.** (a) CH<sub>4</sub> mole fraction time series from the mobile near-surface measurements and (b) wind rose on **December 01, 2020**. Enhancement of CH<sub>4</sub> mole fractions above the background in plume transects (c) & (d) along the near-landfill (ABC) road and (e) & (f) far-landfill remote road (EF). The distances along road segments are computed from A and E respectively for near-landfill (ABC) and far-landfill (EF) roads. Black lines in (c)-(f) show the averaged mole fractions computed from these multiple transects.

**Figure S1.22.** (a)  $\text{CH}_4$  mole fraction time series from the mobile near-surface measurements and (b) wind rose on **December 08, 2020**. Enhancement of  $\text{CH}_4$  mole fractions above the background in plume transects (c) & (d) along the near-landfill (ABC) road and (e) & (f) far-landfill remote road (EF). The distances along road segments are computed from A and E respectively for near-landfill (ABC) and far-landfill (EF) roads. Black lines in (c)-(f) show the averaged mole fractions computed from these multiple transects.
