Figure (a) shows the percentile distribution of solar irradiance across different times of the year. The 95th, 50th, and 5th percentiles are indicated by ▼, ■, and △ respectively. Figure (b) presents the KGE, T_{skill}, and kurtosis values for each formula identification number, with KGE and T_{skill} represented by blue squares and green stars, respectively, and kurtosis by red triangles. Figure (c) displays the bias and RMSE values for the same identification numbers, with bias shown by blue diamonds and RMSE by red circles.
