(a) CFC-12 10 km

(b) CFC-12 14 km

(c) CFC-11 10 km

(d) CFC-11 14 km

(e) HCFC-22 10 km

(f) HCFC-22 14 km

Latitude / deg

Latitudes and longitudes are crucial for understanding atmospheric studies. These graphs show the concentration of various gases over a 10 km and 14 km altitude range from 2003 to 2012. The concentration is measured in pptv (parts per trillion by volume). The color scale indicates the concentration levels, with red representing higher concentrations and blue representing lower concentrations.
