**Figure S1.** Drop size distribution for non-seeded cloud (NSCI) on 21 August 2019. The effective radius ( $r_e$ ,  $\mu\text{m}$ ), vertical velocity ( $W$ ,  $\text{ms}^{-1}$ ), total droplet number concentrations ( $N_t$ ,  $\text{cm}^{-3}$ ) in the diameter range 2-50  $\mu\text{m}$ , and drizzle concentration (Drizzle con,  $\text{cm}^{-3}$ ) in the diameter range 100-6200  $\mu\text{m}$ , and liquid water content (LWC) are shown for cloud passes.

**Figure S4.** Same as Figure S1 but for SCL on 23 Aug 2019.

29

30

31

32 **Figure S5.** Scatter plot between (a) Effective radius ( $r_e$ ,  $\mu\text{m}$ ) and  $K$  ( $\mu\text{g m}^{-3}$ ), and (b)  $r_e$  versus ( $r_e$ ,  
 33  $\mu\text{m}$ ) and  $Cl$  ( $\mu\text{g m}^{-3}$ ). The colorbar indicates vertical velocity. -ve values indicate updrafts while  
 34 +ve values indicate downdrafts.

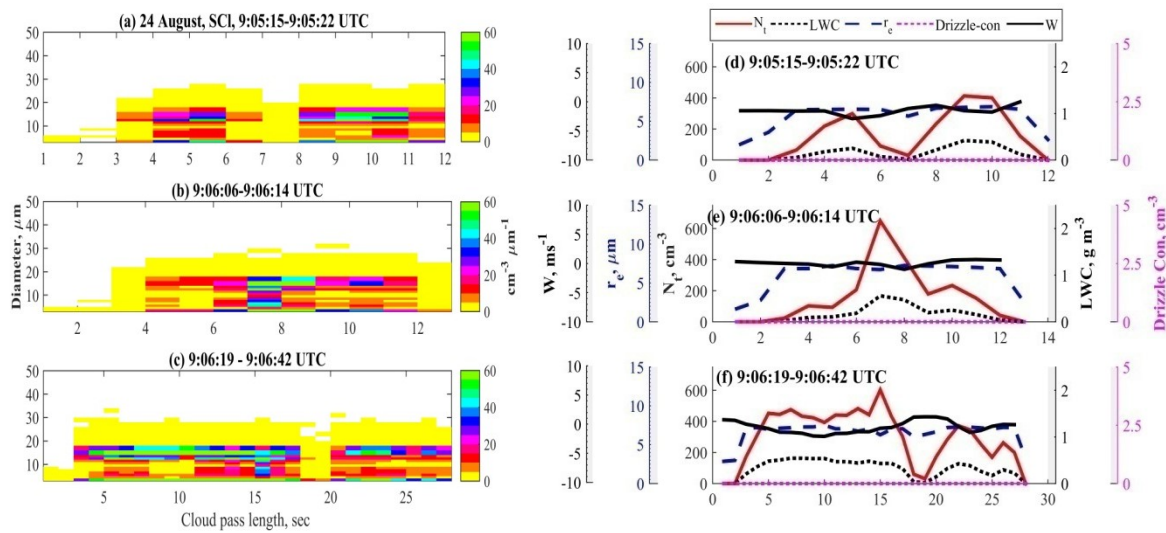

35

36

37  
 38 **Figure S6.** Same as Figure S1 but for NSCI on 24 Aug 2019. The measurement is above cloud  
 39 base.
