## Interactive comment on "Development of a high spectral resolution surface albedo product for the ARM Southern Great Plains central facility" by S. A. McFarlane et al.

S. A. McFarlane et al.

sally.mcfarlane@pnl.gov

Received and published: 4 August 2011

We thank the reviewers for their kind words on our paper. We agree with the second reviewer's point that spectral albedo libraries generally represent homogeneous surfaces because of the small-scale nature of their measurements, and that airborne albedo measurements would be a useful addition to understanding the effects of surface inhomogeneity on the local tower measurements. We have added a couple of sentences on this issue and the reference by Román et al. (2011) to the discussion section of the paper.
