

Interactive comment on “Autofluorescence of atmospheric bioaerosols – fluorescent biomolecules and potential interferences” by C. Pöhlker et al.

Anonymous Referee #2

Received and published: 21 November 2011

The document is a thorough and authoritative review of the field of autofluorescence of atmospheric bioaerosols, supported by extensive experimental data. I would recommend this to anybody wanting to research this field, including existing researchers who may not have considered the broader picture. A job well done.
