Comment

Interactive comment on “Improved instrumental line shape monitoring for the ground-based, high-resolution FTIR spectrometers of the NDACC” by F. Hase

Anonymous Referee #2

Received and published: 18 January 2012

Comments are provided in the attached pdf. Although I recommend "accepted subject to minor revisions", I also strongly recommend expanding the paper to include the TCCON case, as described in the supplement, and this would constitute a more major revision. If the author does not wish to take this option, I would like to ask his plans to publish the extension to TCCON.

Please also note the supplement to this comment:
