I appreciate the thorough reviews by the two reviewers, who obviously spent significant time reading the paper and providing thoughtful and useful comments. I am also pleased that both reviewers reacted generally positive to the paper and recommended publication with minor revisions. I have carefully considered all of the comments and suggested edits and accepted almost all of them. I have checked to make sure all abbreviations and acronyms are defined. Both reviewers suggested broadening the base of the references and I have done this, adding all of the additional suggested references in the revised version.

C477

The second reviewer suggested that some of the figures be revised to eliminate some unnecessary side materials and slide-type titles, increasing font size, etc. I have considered each figure and revised those which were practical to do with a reasonable effort.

I thank the reviewers for their excellent comments.
