## Interactive comment on "Quantification and mitigation of the impact of scene inhomogeneity on Sentinel-4 UVN UV-VIS retrievals" by S. Noël et al.

## **Anonymous Referee #1**

Received and published: 7 March 2012

General comments: The paper has been well written and is about an important topic that affects to more or lesser extent the 1-2 retrievals of earth atmospheric chemistry missions with hyperspectral resolution and should definitely be published.

Having said this, there are a number of points that can be considered for improvement in terms of completeness and clarity.
