Greetings,

In lines 15 and 16 of page 6815, you mention "FUBIS-ASA", stating that it covers the spectral range from 0.3  $\mu\text{m}$  to 1.7  $\mu\text{m}$ . The actual designation of the Sun photometer and aureole radiometer with this spectral range is FUBISS-ASA2 (Freie Universität Berlin Integrated Spectrographic System - Aureole Sun Adapter 2). Its predecessor, FUBISS-ASA covered a spectral range of 0.4  $\mu\text{m}$  to 1  $\mu\text{m}$ .

Regards,

C2348
