Received and published: 30 March 2012

Below, reviewer comments are in italics and marked by ‘R:’, our response is in normal font and marked by ‘A:’.

R: *This is a very good and helpful paper for those working in InSAR and suffering from the nuisance of WV in the atmosphere. The authors have followed my recommendations and improved the paper in the minor points addressed in my review. I recommend it as a reference paper for InSAR experts.*

A: We thank the reviewer for his/her positive feedback.
