Interactive comment on "SAGE version 7.0 algorithm: application to SAGE II" by R. P. Damadeo et al.

Anonymous Referee #2

Received and published: 20 August 2013

The paper describes the SAGE v.7 algorithm, its application to SAGE II data and the detailed comparison with the previous version 6.2. The paper is well-thought; it contains a very detailed description of the algorithm (with many technical details), and, overall, it is well-written.

My comments on the paper (majority of them are minor) are in the annotated manuscript.

They are related mainly to:

- Section on time series (parameters, discussion of results)

- Quality of figures (suggestions for improvement)

C2152

- Missing clarifications.
