I would like to thank Prof. Wang and his team for the nice replies. I apologize if I came across hyper-skeptical but I think I am far more clear about the authors findings after reading the information posted in the discussion.

The data showing the correlation plots on the two N<sub>2</sub>O<sub>5</sub> fragments and the CLNO<sub>2</sub> fragments during the daytime is really interesting and I wish Prof. Wang and his team good luck for the experiment in the fall and I look forward to reading the findings.

Many thanks
