Received and published: 19 March 2013

I ticked off the "major revision" box as the text needs a much improved English language use and style (also explained in my attached detailed comments). It has nothing to do with the scientific significance or the scientific findings of the text. A complete rewrite in terms of better use of the English language, however, is not regarded as a "minor" task, hence the rating. This should not discourage the authors as this is not meant to criticise their scientific work - it is just felt that the paper would vastly profit from a better language as it will be much better understandable in the scientific community, which will in the end contribute to the overall success.

My detailed comments, also highlighting some examples of the language issue, are

C392

attached as a pdf file.
