What an interesting and well written paper. I have recently been working with short range radars, and the issues regarding the inaccuracies of the rainfall mapping due to the radar are something you always have to deal with, without much success most of the times. What this paper represents can be the future of rainfall measurement and mapping.

I still have one question though, what should happen in places where the radar is available and may provide a reliable estimate and in that exact area only, let's assume,

one or couple of microwave links are available?

Thank you for this interesting work.
