

Interactive comment on “Binning effects on in-situ raindrop size distribution measurements” by R. Checa-Garcia et al.

F. Tapiador

francisco.tapiador@uclm.es

Received and published: 9 April 2014

I'd like to thank Dr. Butz for clarifying KIT's involvement in this submission. It is now clear to me that KIT had nothing to do with Dr. Checa-Garcia unacceptable behavior.

Following a formal inquire to the AMTD editorial office, it seems plausible that Dr. Checa-Garcia impersonated me by providing a fake email address (fj.tapiador@uclm.es instead of francisco.tapiador@uclm.es) and tried to deceive both KIT, NASA, UCLM and the editors with the submission. After almost three years under my supervision and the history behind this paper, the unintentional mistake hypothesis on my email is hard to believe.
