Received and published: 31 March 2015

The three reviewers have provided very insightful comments, questions, and suggestions. Their time and efforts are very helpful for the authors to revise their work and to improve the quality of this manuscript.

The authors appreciate the comments from the reviewers, and they have responded to the review comments point-to-point. It is my opinion that the authors have done the necessary work for the revision, and they are ready to continue to work on the revision.

C5299

I encourage them to do so in a timely fashion, i.e. to incorporate their responses to the manuscript.

I think one issue requires additional attention. That is the Leeper et al. 2015a paper, which has been accepted in the Journal of Atmospheric and Oceanic Technology. This paper is closely associated with the TC manuscript. It is appropriate to make necessary link and reference to that paper, but authors need to be very careful about the amount of the overlap between these two papers.
