

Interactive comment on “Intercomparing CO₂ amounts from dispersion modeling, 1.6 μ m differential absorption lidar and open path FTIR at release at Caldara di Manziana, Italy” by M. Queißer et al.

Anonymous Referee #2

Received and published: 20 May 2015

This paper describes the intercomparing CO₂ amounts from modeling, differential absorption, and FTIR for the final goal of the gas hazard. The reviewer thinks the author’s job is not surprising,

C1196

but meaningful and new from the scientific point of view. Also, some points which the reviewer suggested in the first review process were revised, so this paper is recommended for the publication as is.
