## ***Interactive comment on “Comparative measurements of water vapor fluxes over a tall forest using open- and closed-path eddy covariance system” by J. B. Wu et al.***

### **Anonymous Referee #1**

Received and published: 11 July 2015

The comment #6 was truncated during the submission. Here is the full comment:

6) P4718 L7 Why is there a correspondingly larger fraction (15.7%) due to non-stationarity in CP fluxes? What was the percentage of the rejections in OP fluxes due to nonstationarity?
