Dear Authors,

having read the manuscript and taking into account the Referees' comments, I believe that additional work is needed to improve the overall manuscript quality, especially in terms of expositive incisiveness. I do agree with the second referee asking for a general formal revision of the manuscript. The very quick reply followed to his comments doesn't go in that direction. Please, take more time to work on the paper form, assuming that the technical comments are properly addressed.

C2196

Best regards

Gianfranco Vulpiani
