Interactive comment on "The performance and the characterization of Laser Ablation Aerosol Particle Time-of-Flight Mass Spectrometry (LAAP-ToF-MS)" by Rachel Gemayel et al.

Rachel Gemayel et al.

rachel.gemayel@etu.univ-amu.fr

Received and published: 6 April 2016

We appreciate the comments of the reviewer. Please consider that this is the first manuscript to be published related to this commercial instrument. The ultimate goal of this paper was to test the performance of LAAP-TOFMS and we carried out a comparison with some other available instruments in the literature. Currently, the study are ongoing in our lab and comparison with some other instruments such as aerosol mass spectrometer (AMS). The outcomes of this study will be published elsewhere with deeper and systematic discussion about the application of LAAP-TOFMS in a real life environment. General comments: All the minor comments were considered and the text was changed accordingly.
