Received and published: 12 August 2016

The paper by Guerova et al. presents a very good and detailed overview of state-of-the-art and future prospects of the ground-based GNSS meteorology in Europe. It covers the fundamentals in meteorology as well as processing techniques and products. Moreover, it contains a lot of ongoing work and ideas to be applied in future.

I am glad to see this revised version which I recommend for publication. It certainly is a perfect review article for the Special Issue on Advanced Global Navigation Satellite Systems tropospheric products for monitoring severe weather events and climate.
