

Interactive comment on “Review of the state-of-the-art and future prospects of the ground-based GNSS meteorology in Europe” by Guergana Guerova et al.

Anonymous Referee #2

Received and published: 25 August 2016

The paper by Guerova et al. provides an excellent overview of the past findings, methods used, current states, and possible future directions of ground-based GNSS meteorology in Europe as well as giving information on other measurement techniques. This paper would be a great resource of collected knowledge for the community and a good introduction of ground-based GNSS meteorology to people new to the field. I recommend publication (after a few minor revisions such as typos are fixed).
