

Interactive comment on “Evaluation of IWV from the numerical weather prediction WRF model with PPP GNSS processing for Bulgaria” by Tzvetan Simeonov et al.

Anonymous Referee #1

Received and published: 11 August 2016

Dear authors,

I have read your manuscript and, unfortunately, I cannot support its publication in AMT journal. A brief justification of my decision to reject the manuscript is given in the following.

Although the subject of the manuscript is of scientific interest, the approach followed is quite shallow. In particular, the analysis of results does not go in depth and refrains to simply presenting statistics, either in tables or figures. A discussion on the causes of the computed differences is almost absent, while there is no discussion relevant to the available literature. Further, the added-value of the presented work is not very obvious. A simple verification exercise is certainly important, especially for new "products", but

C1

is it enough for supporting a publication?
