24

25 Figure S1: Timeseries of the surface layer model wind (squares) and ground measurement at the  
26 nearby Eaton, CO measurement station (dots) for RD11.

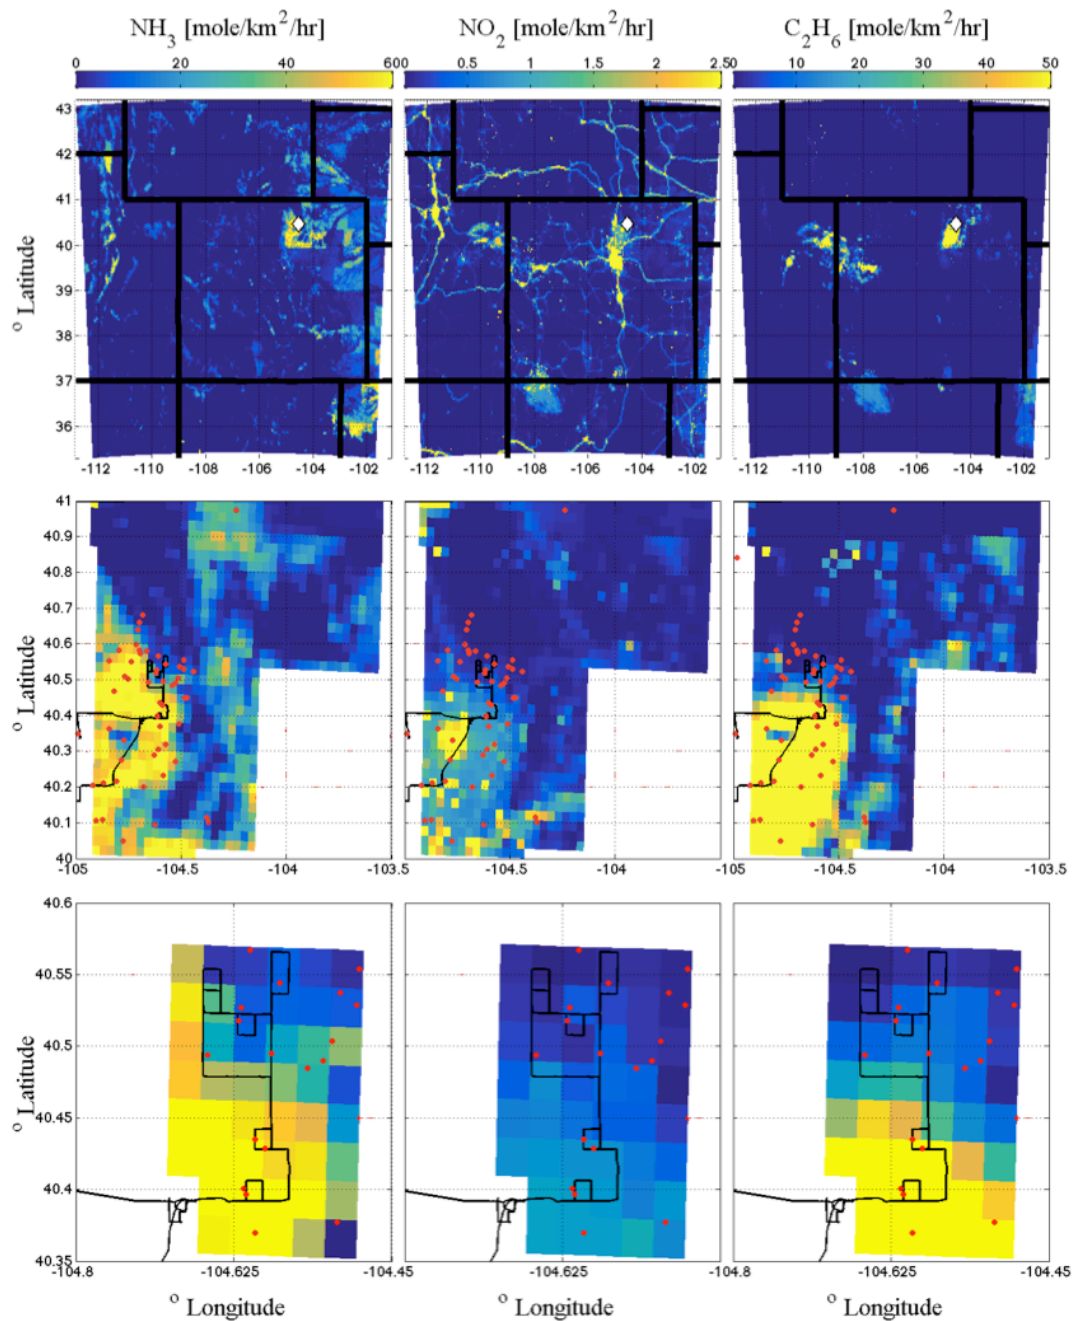

27  
 28 Figure S2: Timeseries of the VCDs measured for A)  $\text{NH}_3$ , B)  $\text{C}_2\text{H}_6$ , C)  $\text{NO}_2$ , during RD10. D)  
 29 PBLH and temperature, E) model wind; (diamonds) model wind averaged over approximately 10  
 30 – 50 m above ground level, (triangles) over half PBLH, (squares) over the full PBLH. Shaded  
 31 areas indicate times at each site.

32

33 Figure S3: Zoom of the area east of Greeley, CO with the RD10 drive track color coded by the  
 34 VCD of (left column, 1)  $\text{NH}_3$ , (middle, 2)  $\text{C}_2\text{H}_6$ , and (right, 3)  $\text{NO}_2$ . Row (a) shows the 5 sites of  
 35 interest, (b) site 1, (d) site 2 from Fig. 6. Rows (c) and (e) show a timeseries of the flux,  
 36 calculated using equation (1); the arrows in 3b and 3d indicate the mean wind direction at each  
 37 site. (Background image from Google Earth 2016)

38  
 39 Figure S4: Emission Inventory (EPA, 2015) based on the July midday hourly emission rate  
 40 during which  $\text{NH}_3$  emission is larger than during other hours.  $\text{NH}_3$  (left),  $\text{NO}_2$  (center), and  $\text{C}_2\text{H}_6$   
 41 (right); the bold black lines in the top panel indicate the state borders with Colorado in the center;  
 42 the red dots in the middle and bottom panels indicate cattle and dairy farm locations, and the  
 43 black line the research drive track.
