Interactive comment on "Assessment of the underestimation of snowfall accumulation by tipping bucket gauges used operationally by the Spanish national weather service" *by* S. T. Buisan et al.

S. Morin (Editor)

samuel.morin@meteo.fr

Dear authors,

We significant delay in part due to the difficulty to gather reviews on this topic outside the community involved in WMO-SPICE, which covers a significant fraction of the international scientific community involved in solid precipitation science, two independent reviews have now been provided. Authors are now asked to post on the AMT discussion forum a point-by-point reply addressing reviewers comments and suggestion, and prepare an upload a revised manuscript accordingly. Apologies for the time taken by

the discussion process.

Yours sincerely,

Samuel Morin AMTD SI Editor (WMO-SPICE).
