Received and published: 5 March 2017

Given the reviews received and the responses of the authors. I encourage the authors to formally upload a revised version, including an example of at least a 3-D velocity spectrum, to show qualitative the type of of unique measurements they have obtained. I understand a parallel scientific effort is underway, but I think including a resulting 3D spectrum without discussing the scientific details or technical details on how it was obtained, would help the authors to make their current paper (and future papers) more attractive.
