Received and published: 4 April 2017

We thank reviewer #3 for their thorough examination of our paper. We have hopefully addressed the points that were raised. We particularly thank the reviewer for highlighting the discrepancy between the field-of-view (FOV) modelling calculations and what should be expected in reality. As a result of this we re-ran the calculations and found residual issues with calibration can cause the offsets observed, rather than anything to do with viewing geometry.

Please find attached a zip archive containing the following pdf files: (1) The points raised by the reviewer (Q1 - 20) followed by our response (R1 - 20); (2) A track changes version of the paper.
