

Review of the revised version of “*NDACC harmonized formaldehyde time-series from 21 FTIR stations covering a wide range of column abundances*” (amt-2018-22)

by Vigouroux et al.

The authors did a great job addressing my comments and concerns, and adequately revised the manuscript. It has been improved by the addition of technical explanations that better motivate their choices related to the retrieval setup. The new formaldehyde products are also more discussed, especially in light of previous studies. Improvements were also brought to the figures to make them and the corresponding discussion easier to follow. The current manuscript fits the scope and standards of AMT. Therefore, I recommend to accept this revised manuscript for publication.

Here are just a few typos I spotted in the text:

- P. 15, line 23: Empty space missing in “and a priori”
- P. 16, line 11: “Indeed, we can...”
- P. 19, line 2: “Rondônia”
- P. 22, line 33: Empty space missing in “(+6 / -3%)”
- The same P. 24, line 8
- P. 27, line13: delete “

I would like to apologize for the delay before reviewing this revised manuscript. Because of a wrong email address used by Copernicus, the initial call for review has not been delivered to me.
