The revised paper "Improved aerosol correction for OMI tropospheric NO2 retrieval over East Asia: constraint from CALIOP aerosol vertical profile" by Liu et al. describes an improved OMI tropospheric NO2 retrieval for East China using CALIOP aerosol vertical profile information.

By including an evaluation of the "QA4ECV" NO2 product in the revised manuscript, a clear effort has been made to address the most important comment from my review of the original paper.

The revised paper can be recommended for publication in AMT.

Minor comment:

Figure 7: the label for the horizontal axis should be "Δalh (km)"
