

### Additional figure.

I noticed that the pdf of the accepted measurement was missing a figure. The figure had undergone the peer review process but the link was missing from the .tex file in the submitted and accepted manuscript. All reviewed iterations of the paper had 8 figures submitted. The final manuscript had 7, there was never a reason to exclude one, but it was a formatting error. I believe the figure should be included in the final version as it is referenced in the text. The pdf of the accepted manuscript has a ?? in the text referencing a missing figure.
