I would just like to make a precision here on the first comment made by Mr. Eriksson about the different versions of the DARDAR-CLOUD product:

"**1.** Just keeping track of which version that is discussed needs an alert brain. On page 3 it is declared that v2.1.1 will be denoted as v1, but still v2.2.1 is used in the text (e.g. page 7,line1) and it is also called the "old" (e.g. in text of Figure 1). In addition, it has already caused us confusion to call the "old" version v1 in the manuscript, when it has the official name v.2.1.1. Do you know the official version number of the "new" version? If it will v3.x, I strongly recommend to use call the old version v2 and the new v3. Anyhow, consider the naming and how the names are used in the text.

Response: I can understand that this naming can be confusing. We keep this V1 / V2 naming, removing any possible renaming, such as v2.1.1 (it was a mistake)."

New response: The answer from the operational team at the ICARE centre came only after the response was sent to AMT and contrary to what was said beforehand, it was decided to call the new version V3. As a result, changes have been made in the manuscript, calling the old version (DARDAR-CLOUD v2.1.1) V2 and the new one V3. Apologies for the late reply and confusion.
