Reviewer: This paper provides some interesting original research into the detection of adulteration of Olive Oils. It should be published but a significant revision is needed before this can be achieved as there are a number of issues that require clarification. [...]

Reply: Thank you for your comments. However, we did not report research about the adulteration of Olive Oils in our paper, but demonstrate how to improve SIFT-MS for soil VOC emission measurements. So we think an error or a mix-up must have happened when uploading the review, and we are in contact with the editor to resolve the issue.
