

Interactive comment on “Aerosol size distributions during the Atmospheric Tomography (ATom) mission: methods, uncertainties, and data products” by Charles A. Brock et al.

Anonymous Referee #1

Received and published: 9 May 2019

Dear Dr. Brock, thank you very much for the detailed response to my review. However, it seems that you missed the first three comments (on the first page of my review)?

These were:

page 4 line 6-7: how many size classes can the POPS determine? page 4 lines 8-15: in which format will PALMS data be made public on the data base? page 4, line 25: HIMIL and UH/LARGE acronyms are not explained (appear here for the first time).

Could you please reply to these comments as well? Thanks.
