

Dr. Pierre Herckes,

Thank you for your comments and advice.

I made some correction following your advice. I hope the correction satisfies the journal criteria.

Q.1

Could you please add error bars to figures.

A.1

Each value in figure 6 represents one test result respectively. So, the error bar is not applicable in this case because error bars can be applicable when each value represents plural results.

Q.2 Figure 2: Could you please delete the “raw data” legend as it is repetitive and clear from the legend. It seems to obscure some data points too.

A. 2 I deleted the label following your advice.

Q.3 Figure 6 seems to have low resolution as well as some others. Please work with the editorial office to ensure high quality figures.

A.3 I managed to make figures higher resolution.

I replaced Fig.2-6 with the higher resolution figures.

Q. 4 Please use only significant digits in your manuscript. E.g. table 3, please write 57% error not 57.32%

A.4 I made corrections following your advice.

Thank you again for your advice.

Sincerely yours,

Kenji MIKI
