Received and published: 1 February 2021

With this note, we want to clarify that the original AMTD manuscript has been exchanged and why this has been done.

The change consists of that the small mission introduced in Sec 2.1.3 now is presented as a hypothetical (but representative) concept. The reason for this change is that the mission previously mentioned is in an evaluation and we were not supposed to possibly influence the selection procedure by presenting results associated with the mission. We consider the new manuscript version scientifically equal to the original version.
