19     This document includes four supplementary figures:

20     Figure S1. Relative difference at each m/z for the mass spectral profile of wood, peat, and smoky coal  
21     burning.

22     Figure S2. Relative difference at each m/z for the mass spectral profile of biomass briquettes and  
23     smokeless coal burning.

24     Figure S3. Scatter plot between OA and temperature (left panel); and wind speed (right panel), color-  
25     coded by date.

26     Figure S4. Mass spectra (left axis) of the OA factors of peat, wood, coal, HOA, and OOA.

35

36

37 Figure S1. Relative difference at each  $m/z$  for the mass spectral profile of wood, peat and smoky coal  
38 burning in the boiler versus the conventional stove.

39

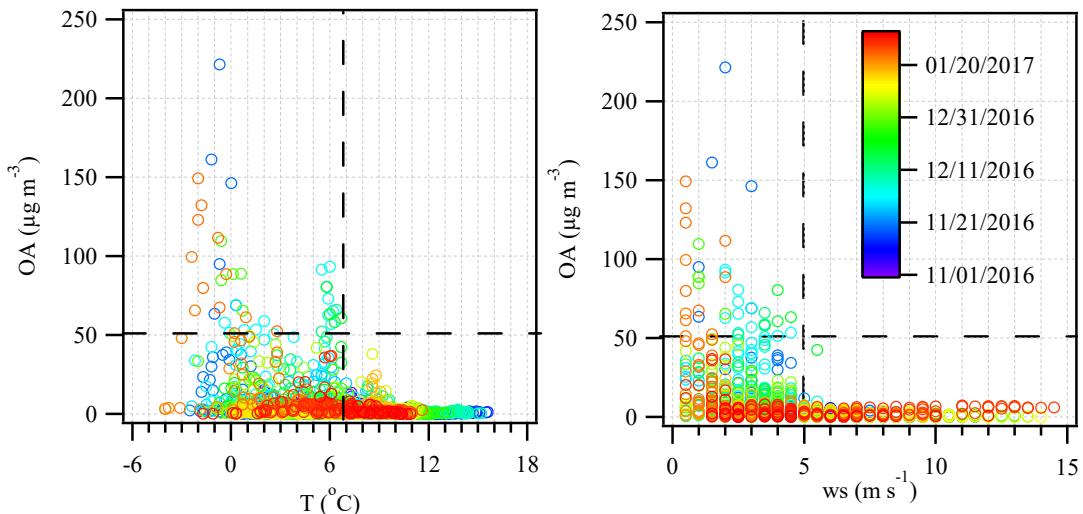

40

41 Figure S2. Relative difference at each  $m/z$  for the mass spectral profile of biomass briquettes and  
42 smokeless coal burning in the conventional versus Ecodesign stove.

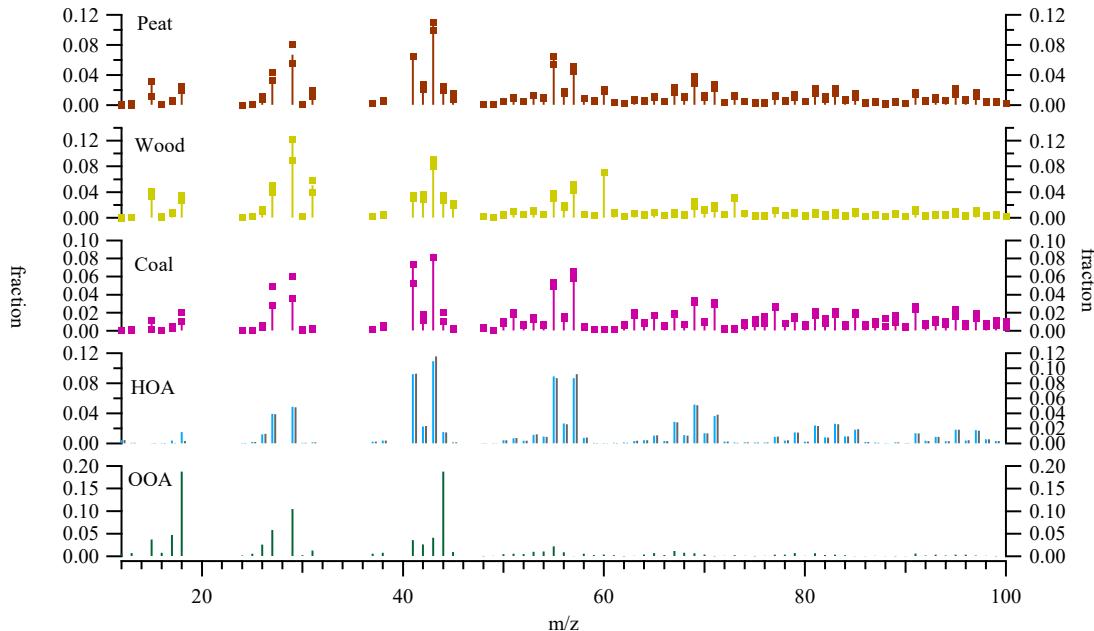

43

44

45

46 Figure S3. Scatter plot between OA and temperature (left panel); and wind speed (right panel), color-coded by date.  
47

48

49 Figure S4. Mass spectra (left axis) of the OA factors of peat, wood, coal, HOA, and OOA. The dots  
50 shown for the peat, wood, coal OA factors were the upper/lower limits allowed to vary. Also shown is  
51 the reference HOA profile (great sticks in Fourth row) from Crippa et al. (2013)

52
