

Review of revised version of manuscript « PARAFOG v2.0: a near real-time decision tool to support nowcasting fog formation events at local scales ».

This second version of the manuscript is much easier to read. There are still a few, minor, mistakes that should be corrected, but the article can be published once this is done.

Line 377 : the reference to Figure 7 is wrong. The reference should be Figure 8.

Table 2 on page 28 : The parameters for RAD (STL) are visibility and RG (visibility and CBH). RAD and STL in column 1 must be swapped.

Figure 5 on page 34 : the gray box is hardly visible.
