A typo was fixed in Section 6.4.

The old text read: "For OCO-3 v10, the coastal crossings alone were used to determine the ocean-glint global scaling factor of 0.9997, as described in Section~4.2.3 of the DUG."

The new text reads: "For OCO-3 v10, the coastal crossings and model fields were used to determine the ocean-glint global scaling factor of 0.9961, as described in Section~5.1.5 of the DUG."
