

One small thing in Figure 1b: As you mention in the text, the prevailing wind direction is about  $100^\circ$  but the white arrow in the Figure looks more like  $140\text{-}150^\circ$ . Please check for correctness.

Since Figure 1b is a photograph, the direction of the white arrow (the prevailing wind direction) is just indicative. However, to be more precise, we modified both Figures 1a and 1b to include the north direction and (in Figure 1b) a white arrow at about  $100^\circ$  indicating the wind direction.
