

Dear Andrew Sayer,

Thank you for your constructive feedback on the revised manuscript.

1. **ISCCP classifications** – We clarified that ISCCP is not used as a detection method, but as a standard classification framework. Relevant clarifications were added in the Abstract, Introduction, Methods, and Discussion.
2. **Cohen's kappa** – The reference (Cohen, 1960) has been added and κ is now consistently used in place of the word “kappa”.
3. **Acronyms** – All acronyms are now defined at first use in both the abstract and the main text.
4. **Line 387** – The unclear sentence has been rephrased for clarity.

Kind regards,

Zaneta Nguyen Huu
