

Response to Reviewer 1

The authors have still not specified the concentrations of analytes in the aqueous solutions used in the particle nebulizer.

Authors: Thanks for the reviewer's reminder. The mass concentrations of analytes in the nebuliser were included in the revised manuscript as follows:

Line 131 – 132

- All examined compounds except adonitol had a mass concentration of around 0.5 g L⁻¹. The mass concentration of adonitol in the atomiser was around 3 g L⁻¹.
